1. INTRODUCTION

The 1998 Children's Act, which defines a child as a person below the age of eighteen years, spells out the rights of children in Ghana and the responsibility of the nation to providing their needs. Given their dependency on adults, children are a population sub-group for whom the protection of their welfare is highly prioritised. The global priority in protecting children is reflected in the Sustainable Development Goals where more than half of the goals, that is nine out of 17 (1,2,3,4,5,6,8,11 and 16) have targets that directly reference children or girls.

Ghana has several policy frameworks that aim to protect children's welfare. These include the National Social Protection Policy (2015) whose targets include "reducing by at least 50% the proportion of men, women and children of all ages living in poverty in all its dimensions by 2030", in line with SDG1; the Child and Family Welfare Policy (2015) whose objectives include "designing child and family welfare programmes and activities to more effectively prevent and protect children from all forms of violence, abuse, neglect and exploitation"; and the 1995 Free and Compulsory Universal Basic Education Programme (FCUBE) which aimed to make "schooling from Basic Stage 1 through 9 free and compulsory for all school-age children by the year 2005" as stipulated in the 1992 constitution.

This thematic brief presents statistics on children in Ghana focusing on the number and distribution of vulnerable children. The selection of areas of vulnerability is guided by the rights of the child articulated in the Children's Act. They are identified in this report as lacking shelter, having difficulty in performing activities, orphaned, not living in a household headed by a biological parent, not attending school, and ever in union i.e. married or living with partner.

The report also, for the first time, presents a national portrait of multidimensional child poverty using census data. Household measures of multidimensional poverty have been known to underestimate child poverty because of the unique needs that children have compared to adults. This report thus presents a child-centred non-monetary poverty measure that provides information on the different dimensions in which poor children are deprived.

The main aim of presenting these statistics is to provide information to support the assessment of how well children's fundamental rights in Ghana are being protected, the monitoring of progress towards the achievement of the goals in national child-related policies and programmes, and the development of interventions to improve the welfare of deprived children.

Investments in children's rights is a necessary building block for sustainable development. Childhood conditions are inextricably linked to adult outcomes that benefit the nation such as labour force productivity and earnings, ability to break the cycle of poverty, health, and investments in the education and health of subsequent generations.

2. DEFINITION OF CONCEPTS, DATA SOURCES AND ESTIMATION

2.1. Definition of Concepts

2.1.1. Behind grade for age

Refers to enrolled pupils who are older than their recommended age for their class, which will be indicative of delayed entry, grade repetition or intermittent attendance. Being behind grade for age has been shown to negatively influence students' academic and socio-emotional outcomes.

2.1.2. Child

Defined in the 1998 Children's Act as a person below 18 years of age.

2.1.3. Difficulty in Performing Activities

This refers to limited or lack of ability to perform specific functions in the following domains: sight, hearing, physical (walking or climbing stairs), intellectual (remembering or concentrating), self-care, and speech.

2.1.4. Engagement in economic activity

This is defined as work contributing to economic production of goods and services. For the 2021 Population and Housing Census (PHC) the reference period was the seven days, before Census Night (i.e. 21st – 27th June, 2021).

2.1.5. Floating populations

These are transient populations who sleep outdoors.

2.1.6. Homeless households

Refers to households who sleep outdoor at fixed locations each night.

2.1.7. Multidimensional poverty

This a non-monetary measure of poverty that reflects the different areas in which children can be deprived of their needs and rights. This measure is computed for children in the household population for the age groups 0 to 4 years, 5 to 11 years, and 12 to 17 years (separately for males and females).

The dimensions utilised for the computation of child multidimensional poverty are housing (electricity, overcrowding, clean energy cooking fuel, water, and sanitation); education (school attendance, educational attainment, school lag, illiteracy); health (health insurance); child protection for 12 to 17 years (marriage, childbearing);

and access to information (household ownership of TV, radio or ICT device, ownership of mobile phone for 12 to 17 years).

These dimensions and age cut-offs are guided by the UNICEF Multiple Overlapping Deprivation Analysis framework which proposes different dimensions of deprivation for the ages 0 to 4 years, 5 to 14 years, and 15 to 17 years. These age cut-offs are modified in this analysis because data on marriage and childbearing is only available for the population 12 years and older. It is estimated by sex for children 12 to 17 years because questions on children ever born were only asked of females 12 years and older.

2.1.8. *In union*

Refers to marriage or living together with a partner.

2.1.9. *Informal union*

This is defined as living together with a partner without civil or traditional recognition.

2.1.10. *School attendance*

School attendance is defined as enrolment and participation in education at an educational institution or programme for organised learning at any level. For analytical purposes this is classified as never attended, attending now, and attended in the past. Attended in the past refers to children that have ever attended school but were no longer in school at the time of the conduct of the census.

2.2. Data Sources

The statistics presented in this report are generated from the 2021 PHC, with data from the 1960 to 2010 census used to present trends.

The 2021 PHC collected data on schooling attendance for the population 3 years and older, economic activity for population 5 years and older, marriage for population 12 years and older, difficulty in performing activities for population 5 years and older, and usage of ICT for population 6 years and older. Thus, the statistics presented varies by age group depending on the indicator.

Data on economic activity, marriage, and usage of ICT were only sought of persons in the household population.

2.3. Estimation

The correlates of multidimensional child poverty are estimated using a logistic regression. Four models are presented for three age groups – 0 to 4 years, 5 to 11 years, and 12 to 17 years and then for all children. The selected correlates used in the estimation and the rationale for their inclusion are explained in section 3.

3. JUSTIFICATION FOR THE SELECTION OF INDICATORS OF MULTIDIMENSIONAL CHILD POVERTY

This section presents the justification for the selection of key indicators of child multidimensional poverty such as parental survival, relationship to the head of household, and household socio-demographic characteristics. These indicators are used for the estimation in addition to control variables for geographic location (region and type of locality) which are expected to also influence the likelihood of a child being multidimensionally poor.

3.1. Parental Survival

The loss of a parent makes children vulnerable as they lose parental protection and in some cases experience reduction in household income where the deceased parent was an income earner. Further, orphaned children who do not live with their parents or in parent-headed households are at risk of having decisions taken for them by persons who may not be as interested in their welfare as their own parents would be.

3.2. Biological Parent Relationship with Head of Household

Relationship to the head of household is expected to influence child welfare. This is because heads of households who are biological parents to the child would be expected to be more interested in safeguarding their children's wellbeing. Household heads who are not biological parents of the child may have less interest or could have similar interests but competing demands on their resources.

3.3. Household Socio-Demographic Characteristics

The household socio-demographic characteristics which is indicative of the level of household resources can predispose households to take decisions detrimental to the welfare of children. Household characteristics can influence whether children are prevented from attending school to save money, and/or children, especially girls are forced into early marriage for bride wealth. Indicators of household socio-demographic characteristics considered in this report are household head education, literacy, and gender.

4. KEY FINDINGS

Statistics presented in this section are generated using data from the 2021 Population and Housing Census unless otherwise indicated.

Note: K denotes a thousand (1,000) and M denotes a million (1,000,000).

4.1. Trends

The population of children has increased almost four-fold from 3.3 million during the first post-independence census in 1960 to 12.9 million in 2021.

FIGURE 1: POPULATION OF CHILDREN IN GHANA, 1960 TO 2021

The population share of children has declined from 49.2% in 1960 to 41.8% in 2021.

FIGURE 2: SHARE OF GHANA'S POPULATION THAT IS UNDER 18 YEARS, 1960 TO 2021

4.2. Patterns of Vulnerabilities

Almost 6,000 children in Ghana, mainly in urban areas, are living without shelter i.e. sleeping outdoors. Three regions – Greater Accra (43.6%), Ashanti (15.7%) and Eastern (5.4%) have almost two-thirds (64.6%) of the children without shelter.

FIGURE 3: CHILDREN 0 TO 17 YEARS LIVING WITHOUT SHELTER

FIGURE 4: REGIONAL DISTRIBUTION OF CHILDREN 0 TO 17 YEARS LIVING WITHOUT SHELTER

Difficulty in seeing is the domain that has the highest prevalence, affecting over 100,000 children aged 5 to 17 years followed by intellectual (64,400), with speech (52,927) being the lowest.

FIGURE 5: CHILDREN 5 TO 17 YEARS WITH DIFFICULTY IN PERFORMING ACTIVITIES BY DOMAIN

Nationally, there are 275,562 children with difficulty in performing activities in at least one domain, out of which 47,107 children have severe difficulty or cannot do the activity at all.

FIGURE 6: CHILDREN 5 TO 17 YEARS WITH DIFFICULTY IN PERFORMING ACTIVITIES BY SEVERITY OF DIFFICULTY

Ashanti (50,311) leads all regions with the highest number of children who have difficulty in performing activities followed by Greater Accra (30,334) and Eastern (29,711). The three regions combined have a 40.0% share of the children with difficulty in performing activities.

FIGURE 7: CHILDREN 5 TO 17 YEARS WITH DIFFICULTY IN PERFORMING ACTIVITIES BY REGION

Nationally, 846,627 children have lost at least one parent with over half a million (587,848) having only their mother alive.

FIGURE 8: CHILDREN 0 TO 17 YEARS LIVING WITHOUT AT LEAST ONE PARENT

There are 1,215,546 children aged 4 to 17 years in Ghana that are currently not attending school. Except for the age group 15 to 17 years, there are more males not attending school compared to females.

Over a quarter of a million (287,228) children of pre-primary school age are not attending school.

FIGURE 9: CHILDREN 4 TO 17 YEARS WHO ARE CURRENTLY NOT ATTENDING SCHOOL BY AGE

One in every 10 (9.5%) children have never attended school with the percent in rural areas (15.8%) being four times higher than that of the urban areas (3.9%).

FIGURE 10: SCHOOL ATTENDANCE STATUS OF CHILDREN 4 TO 17 YEARS BY TYPE OF LOCALITY

Children aged 4 to 5 years, which is pre-primary school age has the highest percent of children who are not attending school.

In the Savannah Region, more than half (56.1%) of children 4 to 5 years are not attending schooling, a figure more than three times the national average of 18.4%.

FIGURE 11: PERCENTAGE OF CHILDREN 4 TO 17 YEARS WHO ARE NOT ATTENDING SCHOOL BY AGE AND REGION

Administrative unit	4 to 5 years	6 to 11 years	12 to 14 years	15 to 17 years
Savannah	56.1%	43.9%	41.0%	45.7%
North East	42.4%	30.7%	32.0%	38.9%
Northern	42.8%	29.7%	27.5%	33.2%
Oti	37.1%	21.3%	18.3%	25.6%
Upper West	28.0%	17.2%	17.9%	25.8%
Bono East	23.3%	13.7%	15.2%	25.5%
Upper East	22.1%	12.2%	14.8%	24.5%
Ghana	18.4%	9.5%	9.1%	16.6%
Western North	18.6%	6.9%	6.9%	17.1%
Volta	19.4%	6.0%	4.9%	11.2%
Western	12.8%	4.8%	5.4%	15.1%
Ahafo	13.9%	4.4%	4.9%	13.3%
Bono	11.0%	4.7%	6.0%	13.8%
Eastern	11.7%	4.4%	4.3%	11.2%
Ashanti	7.8%	3.0%	4.1%	12.0%
Central	9.7%	3.4%	3.6%	11.1%
Greater Accra	5.9%	2.9%	3.4%	10.8%

The Savannah Region (43.2%) has the highest percent of children 4 to 17 years who have never attended school followed by the North East (31.6%), Northern (30.2%), and Oti (20.8%) regions. In these four regions, the percent of children who have never attended school is more than twice the national average.

FIGURE 12: PERCENTAGE OF CHILDREN 4 TO 17 YEARS WHO HAVE NEVER ATTENDED SCHOOL BY REGION

A little over one-third (36.8%) of children currently in school are at least two years behind grade for age ranging from about a quarter (25.7%) of children 6 to 11 years to half (50.2%) of children 12 to 14 years.

The proportion behind grade in rural areas (44.7%) is 1.5 times higher than in urban areas (30.6%).

FIGURE 13: CHILDREN ATTENDING SCHOOL AT LEAST TWO YEARS BEHIND GRADE FOR AGE BY TYPE OF LOCALITY

Nationally, 11,349 girls are living in households where they are domestic workers, which is six times higher than for boys (1,851).

FIGURE 14: RELATIONSHIP OF CHILDREN 0 TO 17 YEARS TO HEAD OF HOUSEHOLD BY SEX

Four in every 10 children aged 6 to 17 years did not use an ICT device in the three months preceding the Census Night. The Savannah Region (66.3%) has the lowest usage of ICT devices among children followed by North East (61.3%), with figures more than half that of Greater Accra (24.4%) which has the highest usage.

FIGURE 15: PERCENT OF CHILDREN AGED 6 TO 17 YEARS WHO DID NOT USE AN ICT DEVICE IN THE THREE MONTHS PRECEDING CENSUS NIGHT I.E. APRIL TO JUNE 2021 BY REGION

Administrative unit	6 to 17 years	6 to 14 years	15 to 17 years
Savannah	66.3%	72.8%	43.2%
North East	61.3%	67.7%	37.5%
Northern	59.5%	65.4%	35.8%
Oti	56.2%	64.1%	29.7%
Upper West	54.3%	61.2%	31.8%
Upper East	49.6%	56.3%	28.0%
Bono East	49.2%	56.3%	25.3%
Volta	43.2%	50.1%	23.1%
Western North	42.8%	49.2%	22.9%
Ghana	39.0%	44.7%	21.3%
Ahafo	36.9%	43.0%	18.3%
Western	36.3%	41.6%	20.0%
Eastern	36.2%	42.7%	17.8%
Bono	33.1%	38.2%	17.5%
Central	32.8%	38.1%	17.1%
Ashanti	31.1%	36.0%	16.7%
Greater Accra	24.4%	27.3%	15.1%

Nationally, 130,814 children have ever been in union i.e. married or living together with a partner with more of them being females compared to males. Out of that number, 92,828 are currently married.

FIGURE 16: NUMBER OF CHILDREN 12 TO 17 YEARS EVER IN UNION

One out of every five (20.4%) children who have ever been in union is in the Northern Region which has the highest number (26,698).

FIGURE 17: NUMBER OF CHILDREN EVER IN UNION BY REGION

4.3. Multidimensional Child Poverty

About one-third of the household population under 18 years representing 3,862,259 children, are multidimensionally poor.

FIGURE 18: NUMBER OF CHILDREN WHO ARE MULTIDIMENSIONALLY POOR BY AGE GROUP

The incidence of multidimensional child poverty is highest for the age group 0 to 4 years (35.3%) which is about 12 percentage points higher than those 12 to 17 years who have the lowest (22.8% for boys and 21.6% for girls).

FIGURE 19: INCIDENCE OF MULTIDIMENSIONAL CHILD POVERTY BY AGE

About two in every three (64.5%) children who are multidimensionally poor live in rural areas.

FIGURE 20: DISTRIBUTION OF MULTIDIMENSIONAL CHILD POVERTY BY TYPE OF LOCALITY

Rural Urban

0-4 years

5-11 years

12-17 years

0-17 years

The Oti Region, is the only region with more than half (58.9%) of children aged 0 to 4 years being multidimensionally poor. Their poverty rate is almost two (1.7) times the national average (35.3%) and over three times the incidence of Bono Region (16.6%) which has the lowest.

FIGURE 21: INCIDENCE OF MULTIDIMENSIONAL CHILD POVERTY FOR CHILDREN 0 TO 4 YEARS BY REGION

Except for the Bono Region, at least one out of every five children aged 5 to 11 years in all the other regions are multidimensionally poor. This ranges from 20.9% in the Upper East Region to 56.4% in the Oti Region.

FIGURE 22: INCIDENCE OF MULTIDIMENSIONAL CHILD POVERTY FOR CHILDREN 5 TO 11 YEARS BY REGION

More than a third of both boys and girls aged 12 to 17 years are multidimensionally poor in four regions – Oti, Savannah, Northern and North East regions where poverty rates are more than three times that of the Greater Accra Region.

FIGURE 23: INCIDENCE OF MULTIDIMENSIONAL CHILD POVERTY FOR CHILDREN 12 TO 17 YEARS BY SEX AND REGION

Administrative unit	12-17 years (boys)	12-17 years (girls)
Oti	47.8%	46.0%
Savannah	43.4%	42.6%
Northern	37.7%	37.1%
North East	35.0%	35.1%
Western North	26.5%	25.4%
Western	26.1%	24.4%
Upper West	26.1%	25.6%
Ghana	26.1%	22.8%
Central	25.4%	23.7%
Volta	25.1%	23.7%
Bono East	24.4%	23.1%
Upper East	22.8%	22.0%
Ahafo	22.2%	20.8%
Eastern	20.7%	18.8%
Ashanti	17.7%	16.6%
Bono	13.8%	13.3%
Greater Accra	11.1%	11.0%

In both the Greater Accra (550,118) and Ashanti regions (539,048), more than half a million children are multidimensionally poor.

FIGURE 24: NUMBER OF CHILDREN 0 TO 17 YEARS WHO ARE MULTIDIMENSIONALLY POOR BY REGION

Children in rural areas are 230.5% more likely to be multidimensionally poor compared to those in urban areas.

Children who have difficulty in performing activities are more likely to be multidimensionally poor than those who do not – 7.4% more likely for children 5 to 11 years and 28.0% for those 12 to 17 years.

Children whose head of household is a biological parent or grandparent are 47.6% and 62.0% less likely respectively to be multidimensionally poor compared to children with other relationships to the head of household.

Children in female-headed households are 9.0% less likely to be multidimensionally poor relative to those in male-headed households.

Compared to children whose household head is not literate, those who have a literate household head are 47.7% less likely to be multidimensionally poor.

TABLE 1: PREDICTORS OF MULTIDIMENSIONAL CHILD POVERTY USING PERCENTAGES OF ODDS RATIOS FROM LOGISTIC REGRESSION

Variables	0 to 4 years	5 to 11 years	12 to 17 years	0 to 17 years
<i>Base category (male)</i>				
Female	2.6%	-4.7%	-7.6%	-7.6%
<i>Base category (urban)</i>				
Rural	156.0%	144.1%	185.9%	230.5%
<i>Base category (no difficulty)</i>				
Difficulty in performing activities	-	7.4%	28.0%	-
<i>Base category (neither parent alive)</i>				
Both parents alive	-43.9%	-33.7%	-20.3%	-37.6%
Only mother	-26.2%	-11.8%	-4.0%	-1.7%
Only father	-13.1%	2.1%	-4.1%	4.4%
<i>Base category (other relationship)</i>				
Biological parent	-11.2%	-28.1%	-36.9%	-47.6%
Grandparent	-24.2%	-41.8%	-48.6%	-62.0%
<i>Base category (male household head)</i>				
Female household head	-10.1%	-11.3%	-16.1%	-9.0%
<i>Base category (household head has no/pre-primary education)</i>				
Household head has primary/JHS education	-5.9%	-8.8%	-9.7%	-14.2%
Household head has SHS education	-35.2%	-36.6%	-47.9%	-54.4%
Household head has tertiary education	-56.7%	-61.4%	-77.2%	-82.1%
<i>Base category (household head not literate)</i>				
Household head is literate	-39.0%	-43.9%	-46.6%	-47.7%

The models also control for region. Difficulty in performing activities is excluded from the first and fourth models because data on difficulty was collected on the population 5 years and older.

5. CONCLUSIONS

This thematic report presents information on the vulnerabilities of children in Ghana. It aimed to present statistics to assess progress towards achieving national child protection goals.

The findings indicate that a substantial share of children are being deprived of their rights as outlined in the 1992 Constitution and the 1998 Children's Act – rights such as education, shelter, and freedom from coercion into marriage.

Additionally, there are children made vulnerable due to loss of parents, living arrangements or difficulty in performing activities.

The number of children, of both sexes, that have ever been in union is of particular concern – first, because the Children's Act sets 18 years as the minimum age for marriage and secondly because of the attendant consequences of early marriage such as truncated educational attainment, and higher fertility.

These findings thus provide disaggregated statistics to support national and sub-national policymakers, planners, and other stakeholders in the setting of measurable goals related to child welfare for future policy frameworks. The statistics will also guide the development of programmes to reduce the number of vulnerable children in Ghana.

6. APPENDICES – DISTRICT TABLES

TABLE 2: CHILDREN 0 TO 17 YEARS WHO ARE MULTIDimensionALLY POOR BY DISTRICT
