1. INTRODUCTION

The role of language proficiency in communicating innovative ideas, processes, risks, and outcomes is of utmost importance as countries strive for livelihoods and national economic transformation. For instance, Target 4.6 of the Sustainable Development Goals (SDGs) seeks to ensure that by 2030, all youth and a substantial proportion of adults achieve literacy. Consequently, both the global community and individual economies have committed to the tracking of the proportion of the population who can read and write, with understanding, in any language.

This thematic report examines the literacy levels of both children and adults and assesses existing efforts, interventions, and outcomes in Ghana. Specifically, this report analyses issues of illiteracy in Ghana on three broad areas; trends, patterns and plausible drivers and consequences.

In Ghana, several interventions have been instituted to improve literacy levels. Notable among the policy initiatives are the Free and Compulsory Universal Basic Education (FCUBE) launched in 1995 and the current Education Strategic Plan (ESP) 2018–2030. The Ghana 2021 Population and Housing Census revealed that the level of adult literacy was 72 percent. This is compared to 82 percent and 84 percent respectively for Sub-Saharan Africa and among Lower Middle-Income Countries, as reported by the World Bank for 2019.

A review of the current ESP presents the following statistics as a basis for instituting interventions: population of illiterate adults was more than 1.2 million, 54 percent of males and 43 percent of females of those who completed nine years of basic education acquired literacy skills and as of 2018 the latest batch of enrolment of the National Functional Literacy Programme (NFLP) in local languages was over 14,000 learners.

Consequently, the main policy directive in Ghana was to target the adult and youth population who had never enrolled or dropped out of the formal education system and provide them with non-formal education (NFE). Through the Non-Formal Education Division (NFED) of the Ministry of Education the key performance indicators (KPIs) for the 2018 – 2030 ESP were; enrolment in face-to-face adult literacy programmes, enrolment in newly created NFE programmes, number of new NFE programmes developed with textbook/content material (aggregate from baseline), number of new learning centres built, and proportion of non-formal graduates accessing skills development opportunities. These KPIs where possible, should be disaggregated by sex, location, wealth, and disability to help identify vulnerable sub-groups. In addition to the NFLP, Ghana's commitment in reducing illiteracy is reflected in the Coordinated Programme of Economic and Social Development Policies, 2017-2024: An Agenda for Jobs which aims at designing a common national test to assess pupil achievement of foundation literacy and numeracy competency at the primary level. The foregoing demonstrates the intention of the government to improve literacy levels hence the need for this thematic brief.

The focus on trends of illiteracy is informed by its repeated prioritisation in both the past and current policy documents, and the variations in its conceptualisation and measurement over the past decades, and across different national programmes and data collection exercises. Previous assessment of illiteracy has shown variations across different types of locations and key demographic variables, specifically, age and sex which led to the implementation of specific interventions in the past. For instance, the measurement of data on illiteracy has either been by self-reporting, assessment, visuals or linked to formal education. This underpins the report's first objective to assess the patterns of illiteracy and the second objective to present geographic distribution of the illiterate population. Guided by the discourse on illiteracy in both the past and current policy documents, and the existing literature, the third objectives analyse the correlates of illiteracy.

The report mainly presents statistics in absolute numbers to highlight the magnitude of illiteracy in the country. In line with the Sustainable Development Goals' objective to leave no one behind, it is necessary to utilise both numbers and percentages for planning and policymaking.

The next sections present the Definition of Concepts, Data Sources and Measurements; Justification for the Selection of Correlates of Illiteracy, Key Findings; Conclusion and Appendices.

2. DEFINITION OF CONCEPTS, DATA SOURCES AND ESTIMATION

2.1. Definition of Concepts

2.1.1. Literacy

This refers to the ability to read and write with understanding in any language. Illiterate persons are those who cannot read and write with understanding in any language.

2.1.2. Multidimensional Poverty

This is a non-monetary deprivation measure which uses three dimensions (health, living conditions and education) and 12 indicators (nutrition, health insurance, school attainment, school attendance, school lag, cooking fuel, assets, electricity, water, housing, overcrowding and sanitation).

2.1.3. Difficulty in Performing Activities

This refers to limited or lack of ability to perform specific functions in the following domains: sight, hearing, physical (walking or climbing stairs), intellectual (remembering or concentrating), self-care, and speech.

2.2. Data Sources

The statistics presented in this report are generated from the 2021 Population and Housing Census (PHC). Statistics on trends are complemented with data from the 2000 and 2010 censuses. In addition, survey data from the Ghana Living Standards Surveys are utilised to present intercensal statistics on illiteracy.

2.3. Estimation

A logistic regression model is employed to compute the likelihood of being illiterate given the alternative status of each of the explanatory variables (correlates of illiteracy) that have been identified to influence a person's ability to read or write in any language, and with understanding. Three models have been estimated for different age groups given the effect of specific variables on different age groups.

3. JUSTIFICATION FOR THE SELECTION OF CORRELATES OF ILLITERACY

3.1. School Status of Children

Educational attainment at a certain level is expected to guarantee literacy, hence, the immediate policy directive for addressing illiteracy is to ensure that all school-age children are in school. The assessment of the status of school attendance of children and literacy outcomes provides an opportunity to determine whether school attendance ensures literacy.

3.2. Survival of Parents

The responsibility of parents to ensure that their children become literate is compromised in the event of orphanhood from the loss of either one or both parents. The occurrence of orphanhood makes such children vulnerable engendering the need for government-targeted support.

3.3. Literacy Level of Parents

The likelihood of children attaining literacy status is dependent on the literacy status of their parents, who would be in a better position to appreciate the associated benefits. This reflection leads to the hypothesis of inter-generational illiteracy, which suggests that households with illiterate parents are more likely to have illiterate children.

3.4. Economic Activity (Sector of Employment, Employment Status and Occupation)

Literate adults have upward labour mobility in terms of specialised and diversified skills and earnings relative to illiterate adults who demonstrate horizontal movements due to their low and limited skills. Thus, the labour mobility of illiterate adults is restricted especially in their participation across technology-driven sectors.

It is further expected that persons in the labour force who cannot read and write with understanding in any language would face challenges in gaining employment, work predominantly in the informal sector and employ workers to support their economic activities.

3.5. Disability Status

Vulnerable groups including persons with difficulty in performing activities face both individual and system-wide restrictions in achieving lifetime goals. The

individual restrictions are dominated by either stigma, discrimination, or self-exclusion. The system-wide architecture encompasses how friendly infrastructure is, the availability of aids to enhance the ability to perform certain activities, and the scope and targeting of policies for vulnerable groups.

3.6. Language and Digital Literacy

The discourse on literacy, which originally focused on language, has been expanded in the last couple of years to cover many other areas including numeracy, digital, financial, and statistical domains. While these dimensions of literacy have evolved independently, their plausible interrelationships, have not received adequate attention from both researchers and policymakers. For instance, should an individual be language literate to engender digital literacy? This concern is underscored by the higher proportion of persons 6 years and older who use Information and Communication Technology (ICT) devices (78.9%) relative to language literacy (69.8%) from the 2021 Population and Housing Census.

3.7. Multidimensional poverty

Literacy and poverty are related in many ways and at different levels. The relationship is causal and significantly moderated by other socio-demographic, economic, environmental, external shocks, and policy influences.

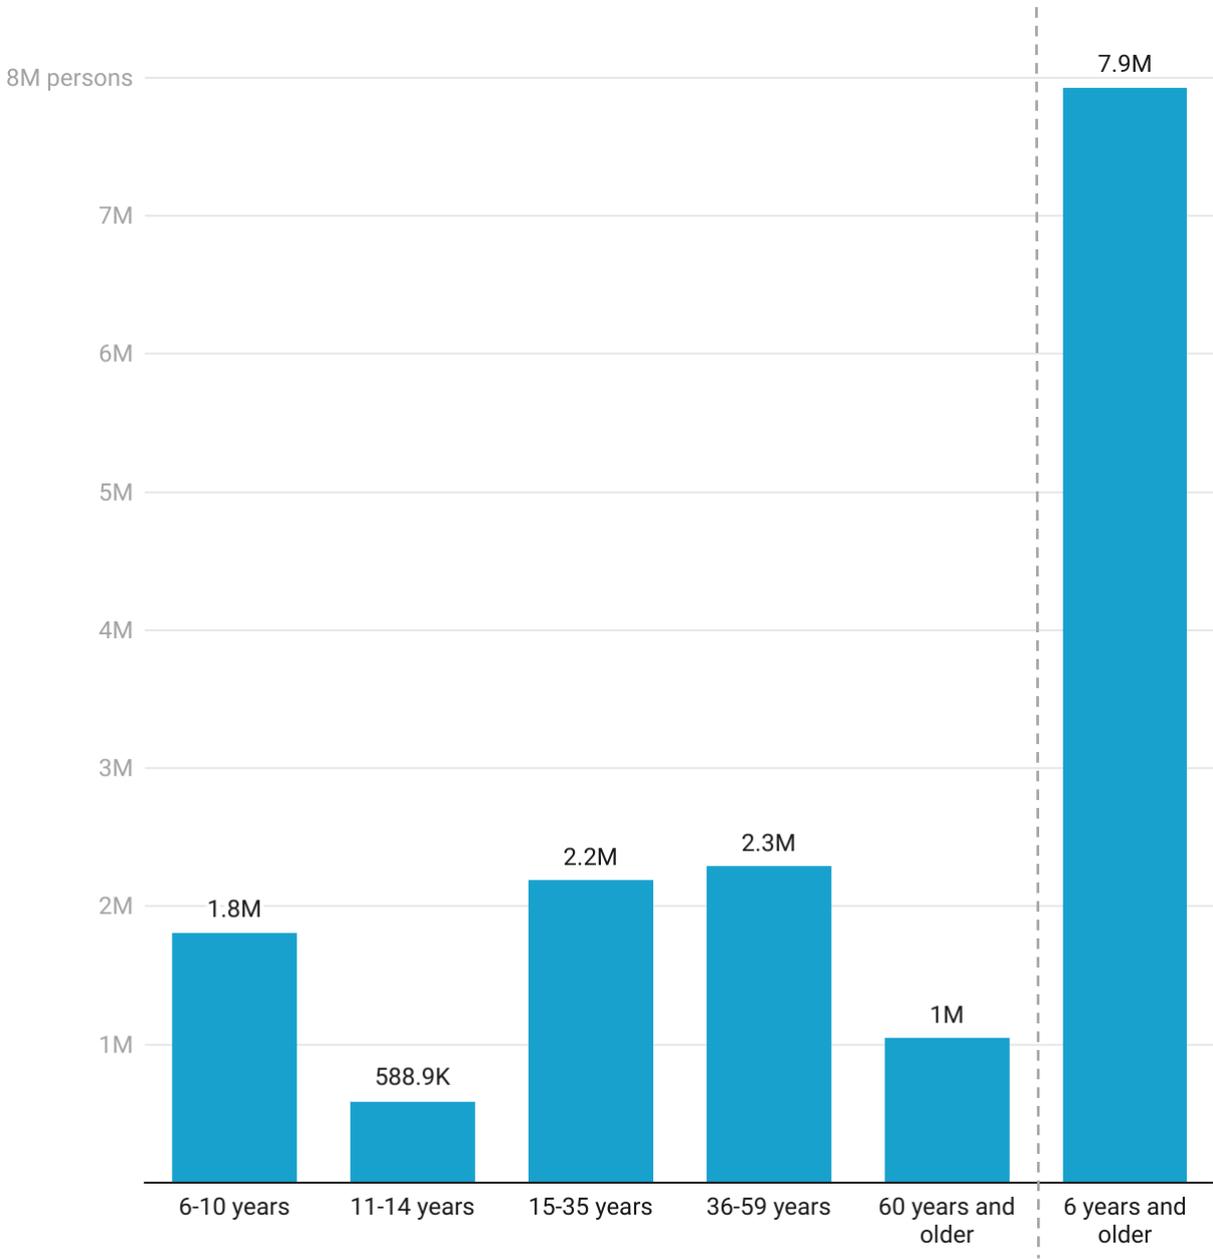

4. KEY FINDINGS

Statistics presented in this section are generated using data from the 2021 Population and Housing Census unless otherwise indicated.

4.1. Trends

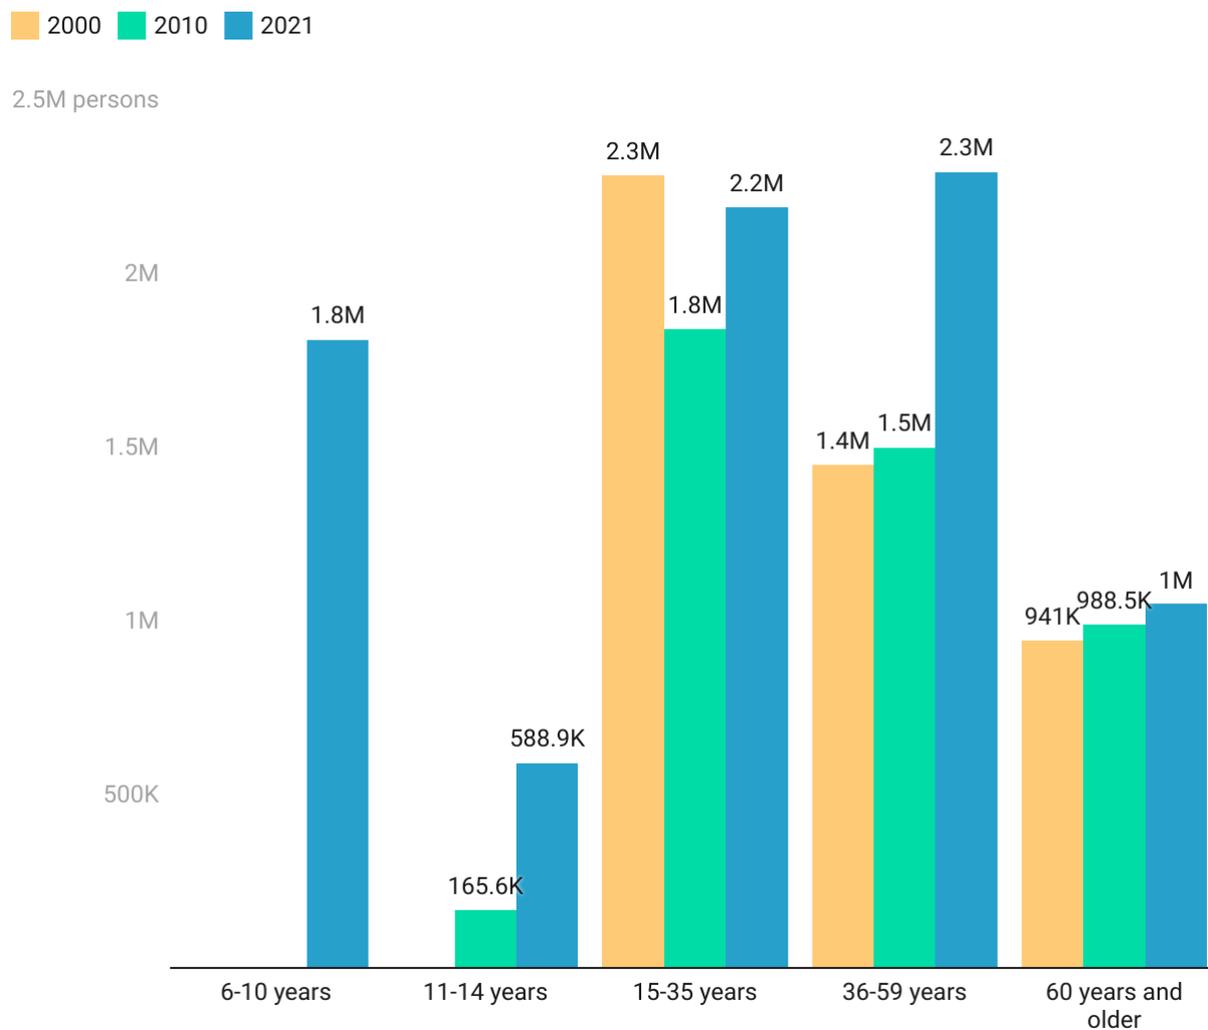

Nationally, almost 8 million persons 6 years and older in Ghana are illiterate, i.e., cannot read or write, with understanding.

FIGURE 1: POPULATION IN GHANA THAT IS ILLITERATE BY AGE GROUP, 2021

The 15 to 35 years age group, had the highest number of illiterates in 2000 and 2010 but 36 to 59 years had the highest in 2021

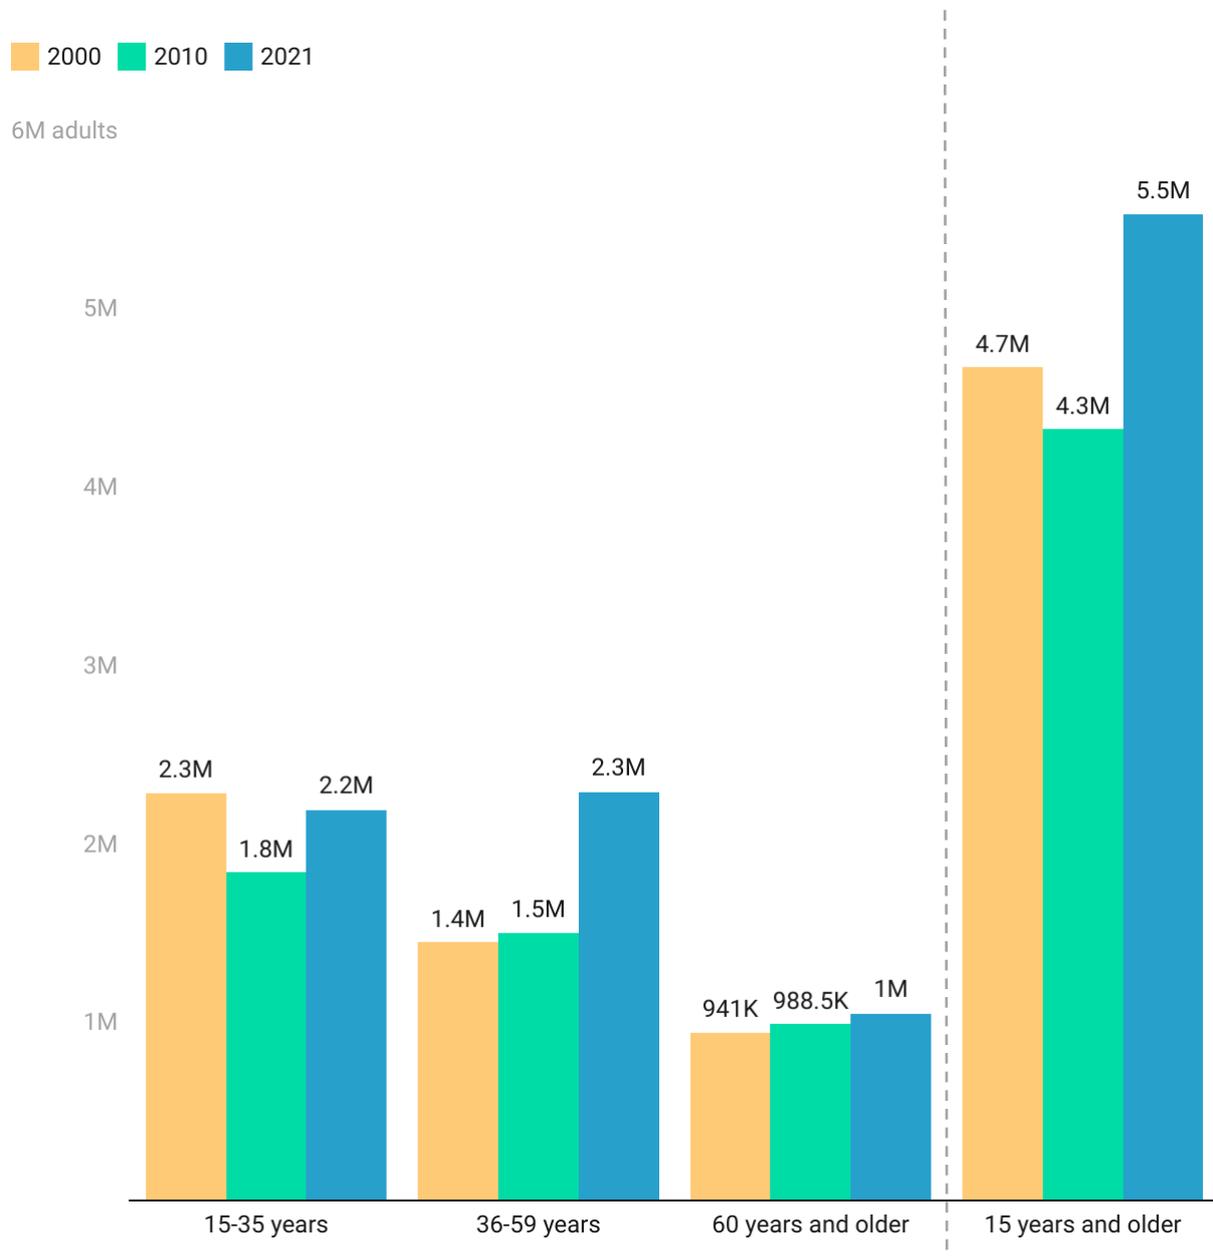

FIGURE 2: POPULATION IN GHANA THAT IS ILLITERATE BY AGE GROUP, 2000, 2010 AND 2021 CENSUSES

Data on literacy is not available for all age groups in previous censuses

The total number of adults (15 years and older) in Ghana that are illiterate increased by over a million between 2010 and 2021

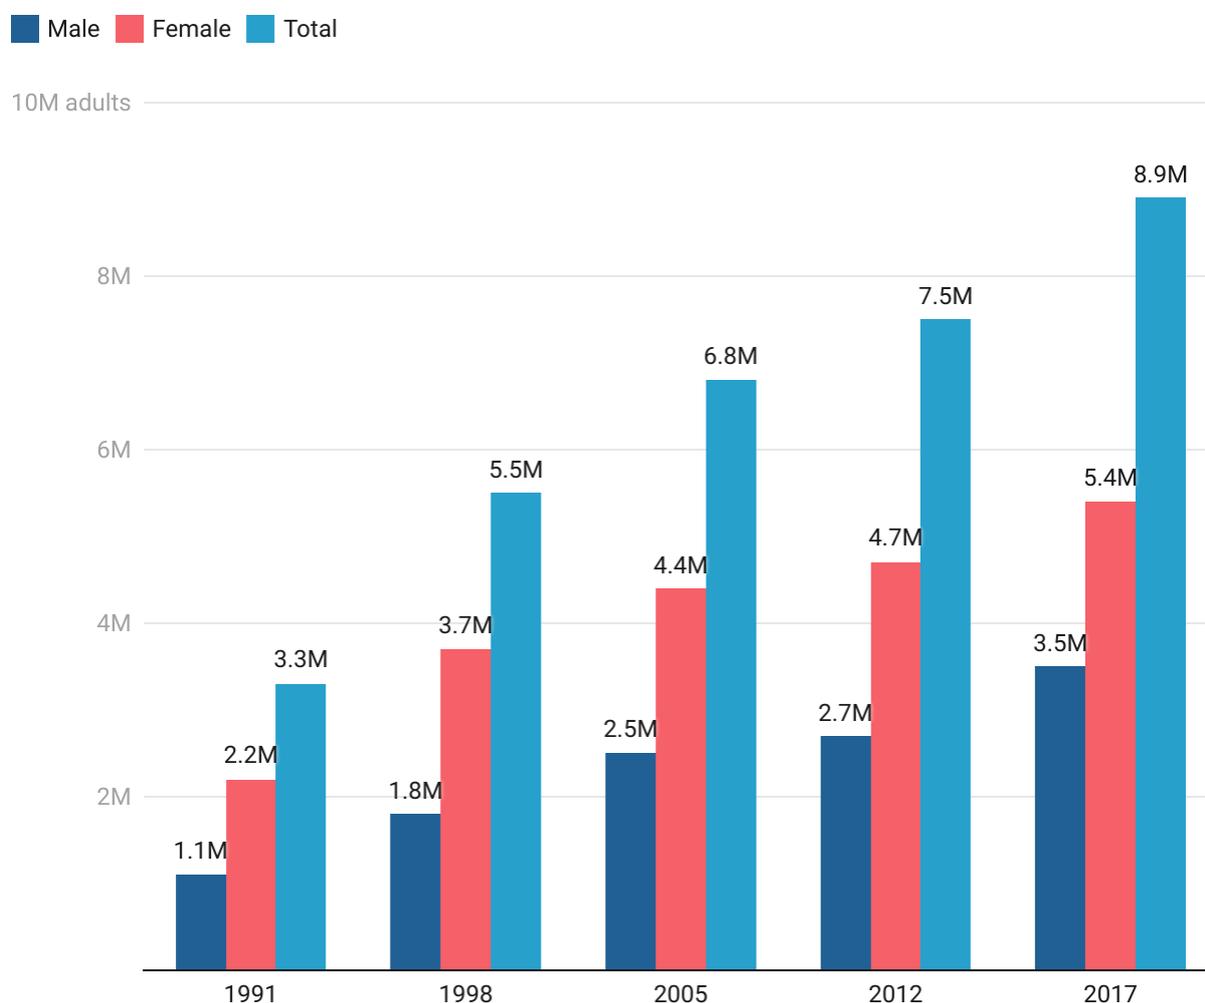

FIGURE 3: ADULT POPULATION (15 YEARS AND OLDER IN GHANA) THAT IS ILLITERATE BY AGE GROUP, 2000, 2010 AND 2021 CENSUSES

Survey data from intercensal years confirm that the number of illiterate adults in Ghana has increased over time.

Direct measures of literacy from the Ghana Living Standards Surveys suggest possible underreporting of the size of the population that is illiterate relative to the statistics derived from self and third party reporting in the Population and Housing Census.

**FIGURE 4: ADULT POPULATION (15 YEARS AND OLDER) THAT IS ILLITERATE, 1991, 1998, 2005, 2012, AND 2017
GHANA LIVING STANDARDS SURVEYS (GLSS)**

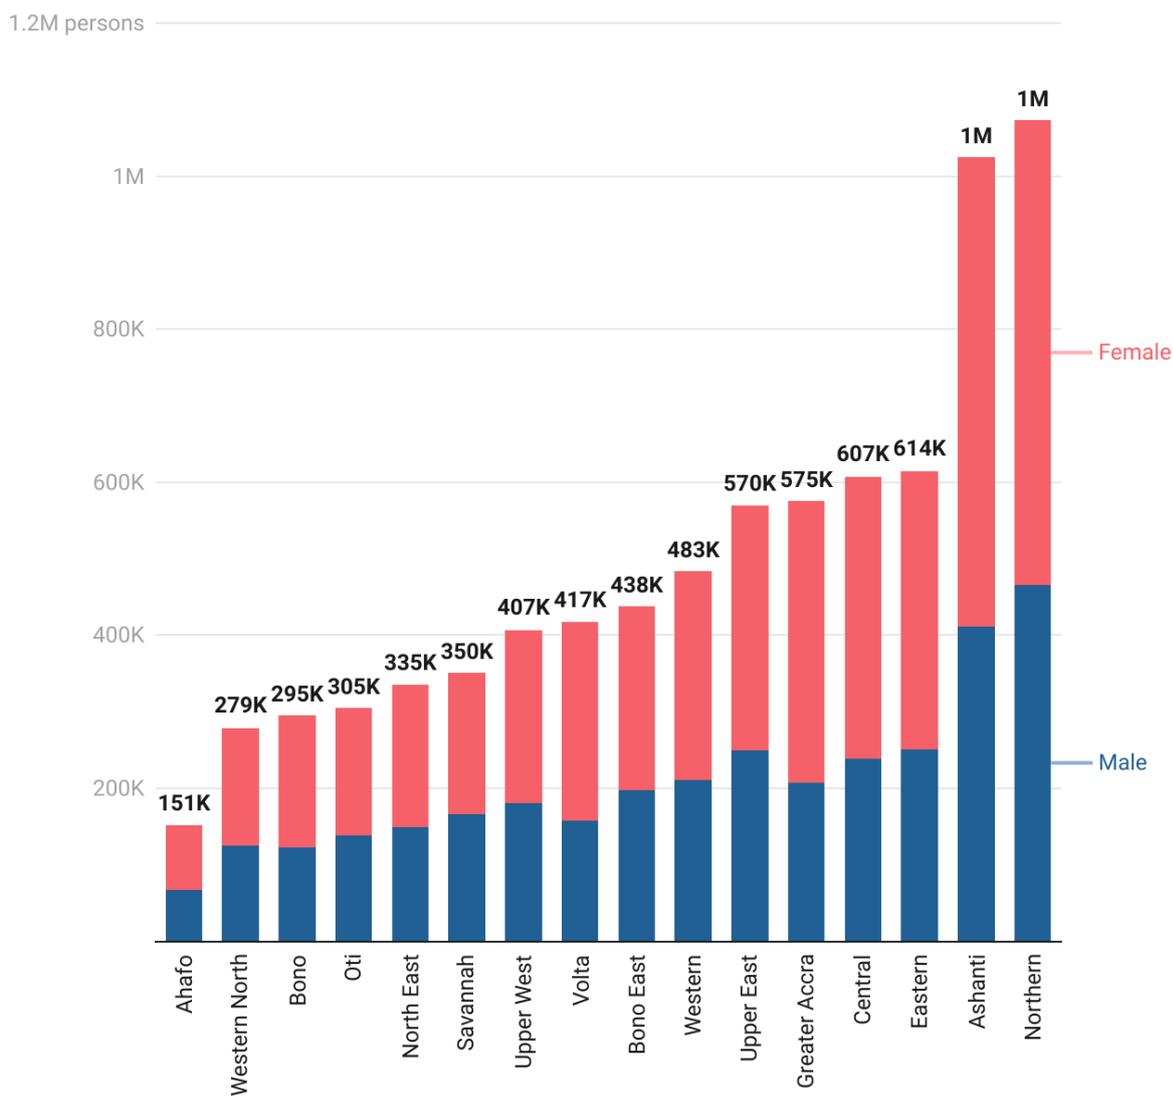

The GLSS collected information on literacy by presenting respondents with a short sentence to read and recording their performance instead of asking them to self-report as the census does

4.2. Patterns

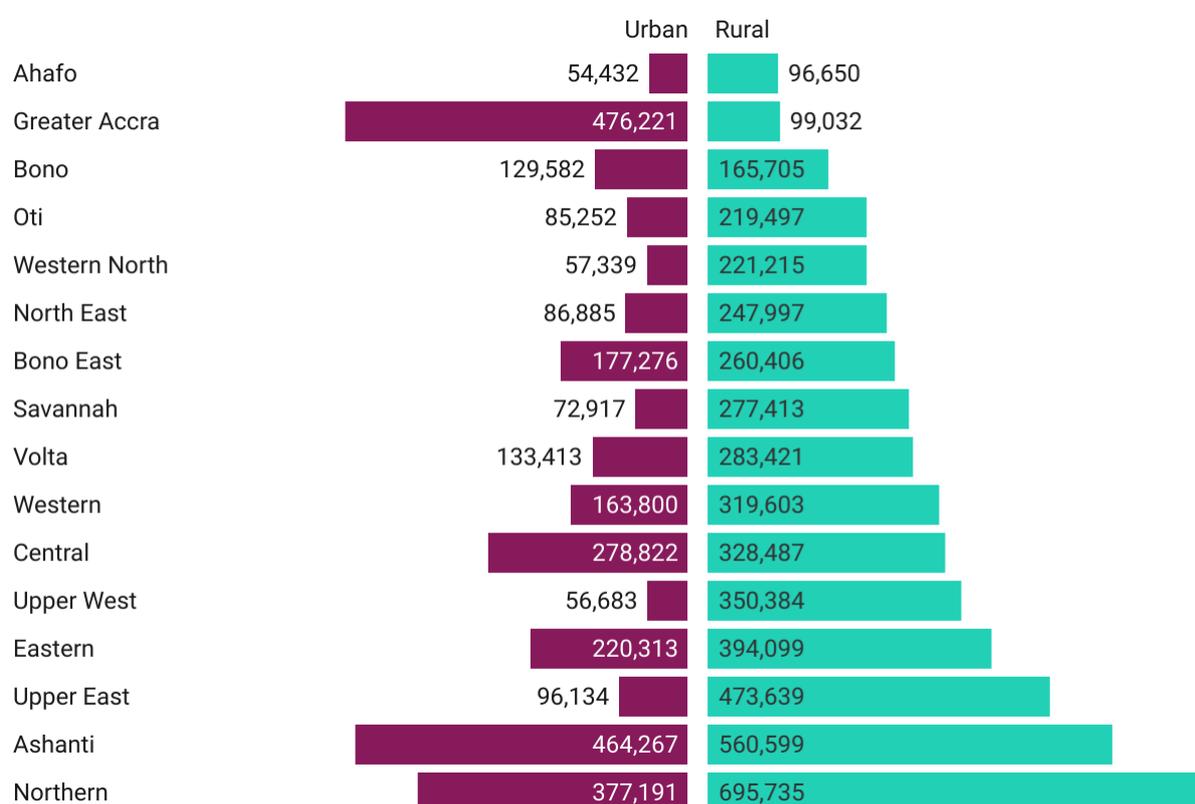

Northern Region has the largest illiterate population, of 1,072,926 million persons, followed closely by Ashanti with 1,024,866 persons

FIGURE 5: ILLITERATE POPULATION AGED 6 YEARS AND OLDER BY REGION

Overall, there are 2,930,527 illiterate persons in urban areas and 4,993,882 in rural areas. In all regions except Greater Accra, the illiterate population in rural areas outnumber that of urban.

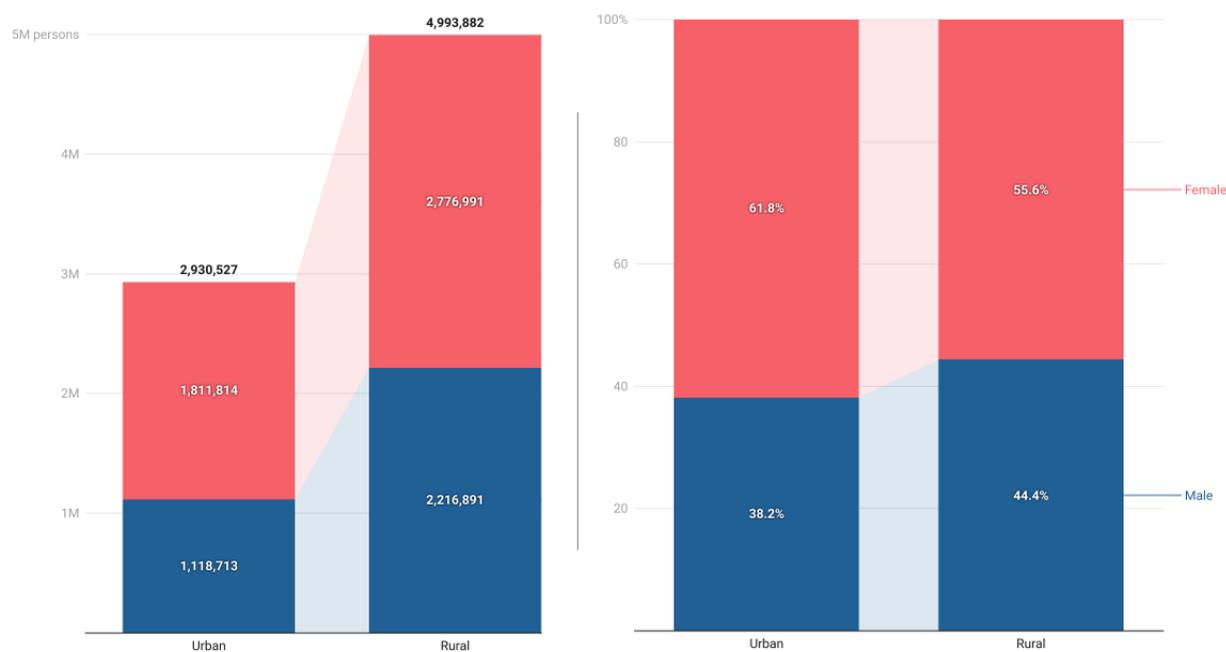

FIGURE 6: ILLITERATE POPULATION BY TYPE OF LOCALITY, 2021

There are over one and a half (1.7) times as many illiterate persons in rural areas as in urban with the rural-urban difference being greater for males compared to females.

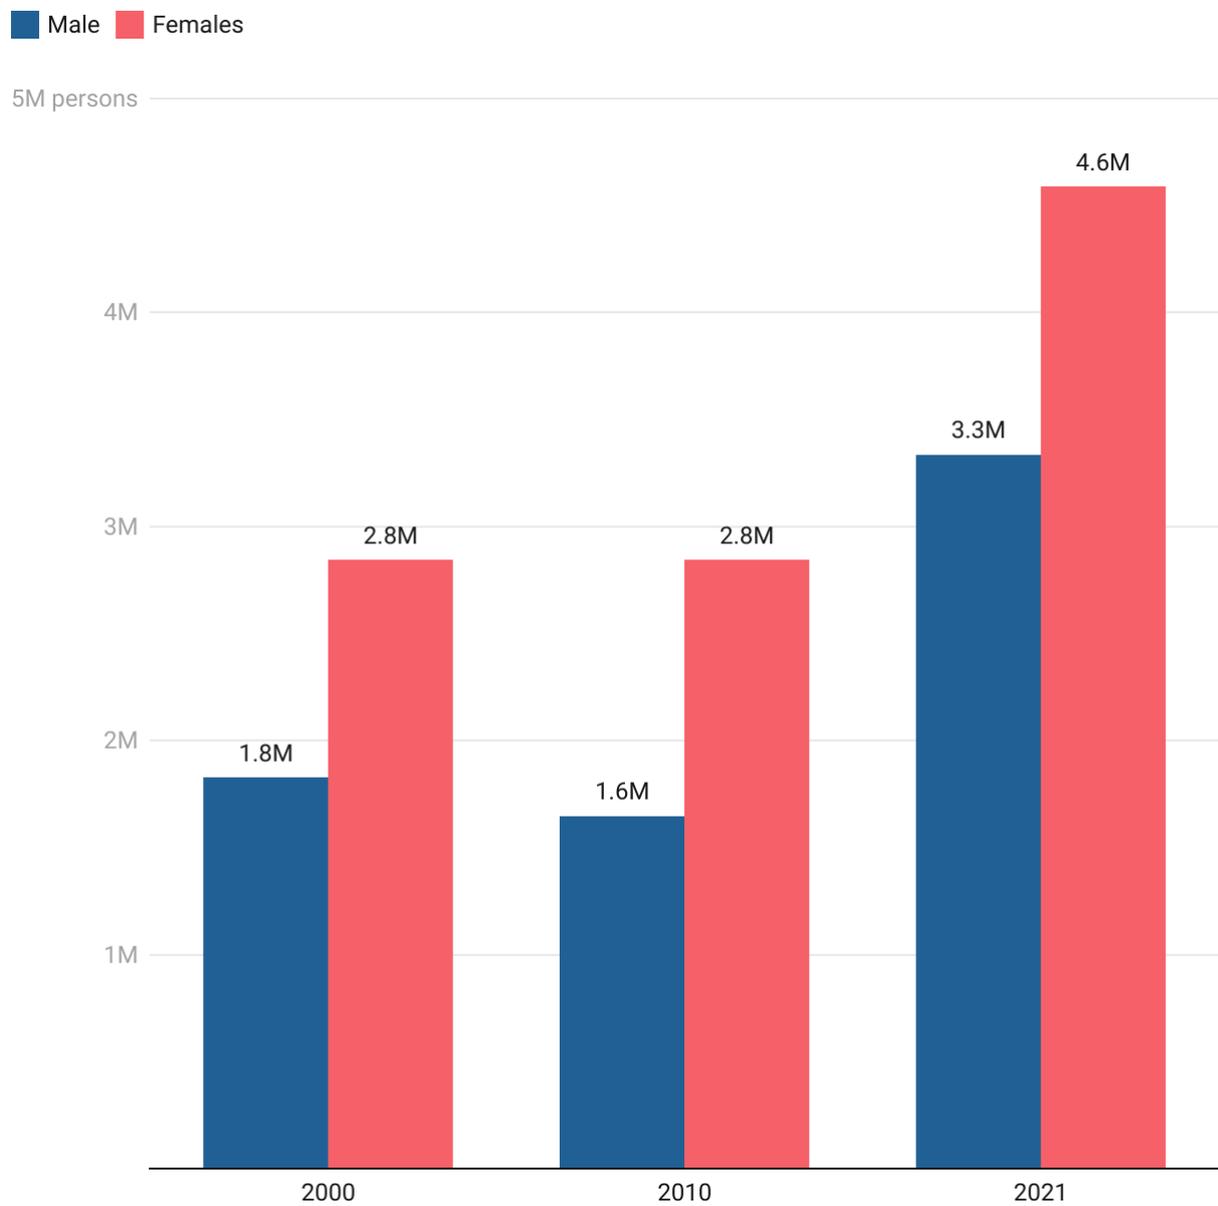

There are over one and a half (1.7) times as many illiterate persons in rural areas as in urban, twice as many for males compared to one and a half times (1.5) for females.

FIGURE 7: ILLITERATE POPULATION BY SEX AND TYPE OF LOCALITY

The female disadvantage in literacy has persisted over time.

FIGURE 8: ADULT POPULATION (15 YEARS AND OLDER) THAT IS ILLITERATE BY SEX, 2000, 2010 AND 2021 CENSUS YEARS

Four of the five districts with the largest population of illiterate persons are in the Northern Region.

Three out of the five districts with the highest percent (more than three-quarters) of the population illiterate are also in the Northern Region while all the districts with the lowest per cent are in Greater Accra.

FIGURE 9: DISTRICT RANKING (TOP AND BOTTOM 5) OF THE NUMBER OF ILLITERATE PERSONS

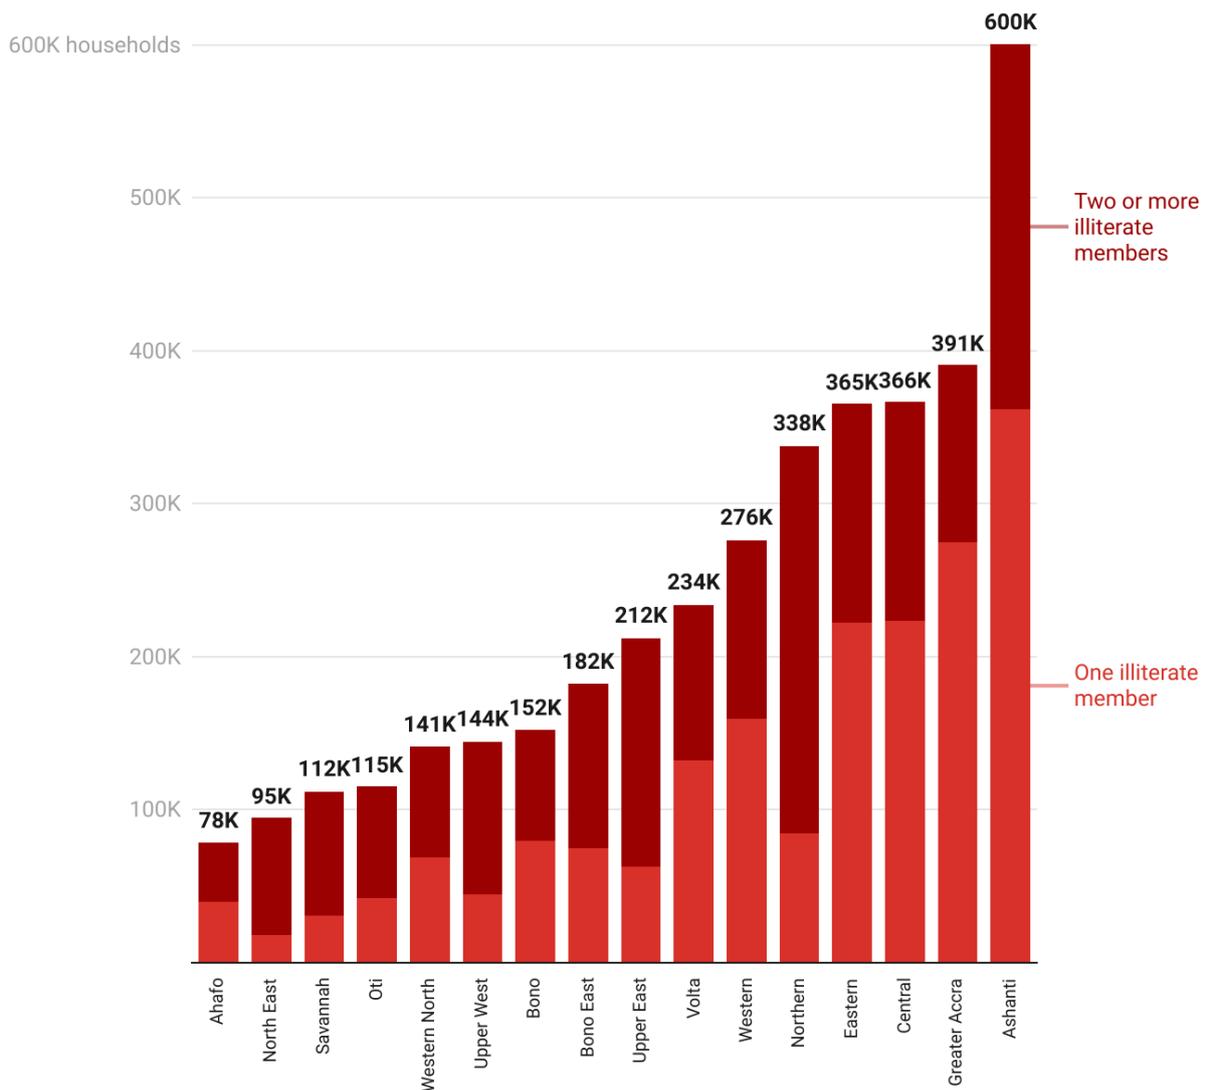

Rank	Region	District	Total illiterate persons	Total illiterate males	Total illiterate females
1	Northern	Tamale Metropolitan Assembly	123,455	50,372	73,083
2	Northern	Nanumba North Municipal	100,046	44,168	55,878
3	North East	East Mamprusi Municipal	98,293	43,631	54,662
4	Northern	Sagnarigu Municipal	94,006	37,518	56,488
5	Northern	Gushiegu Municipal	92,056	41,521	50,535
257	Volta	North Dayi	7,589	3,232	4,357
258	Eastern	Birim South	7,286	2,886	4,400
259	Greater Accra	Korle Klottey Municipal	6,313	2,100	4,213
260	Oti	Guan	4,992	2,044	2,948
261	Greater Accra	Ayawaso West Municipal	4,076	1,581	2,495

FIGURE 10: DISTRICT RANKING (TOP AND BOTTOM 5) OF THE PERCENT ILLITERATE

Rank	Region	District	Percent illiterate (Total)	Percent illiterate (Males)	Percent illiterate (Females)
1	Northern	Karaga	81.0%	74.8%	86.7%
2	Northern	Gushiegu Municipal	80.7%	75.1%	85.9%
3	North East	North East Gonja	80.2%	76.5%	83.9%
4	Northern	Mion	77.7%	72.1%	83.3%
5	Savannah	North Gonja	77.3%	72.8%	81.9%
257	Greater Accra	Ga Central Municipal	8.0%	5.2%	10.6%
258	Greater Accra	Ga East Municipal	7.6%	5.5%	9.6%
259	Greater Accra	Tema West Municipal	6.2%	4.3%	8.1%
260	Greater Accra	La Dade-Kotopon Municipal	6.2%	3.9%	8.2%
261	Greater Accra	Ayawaso West Municipal	5.9%	4.5%	7.4%

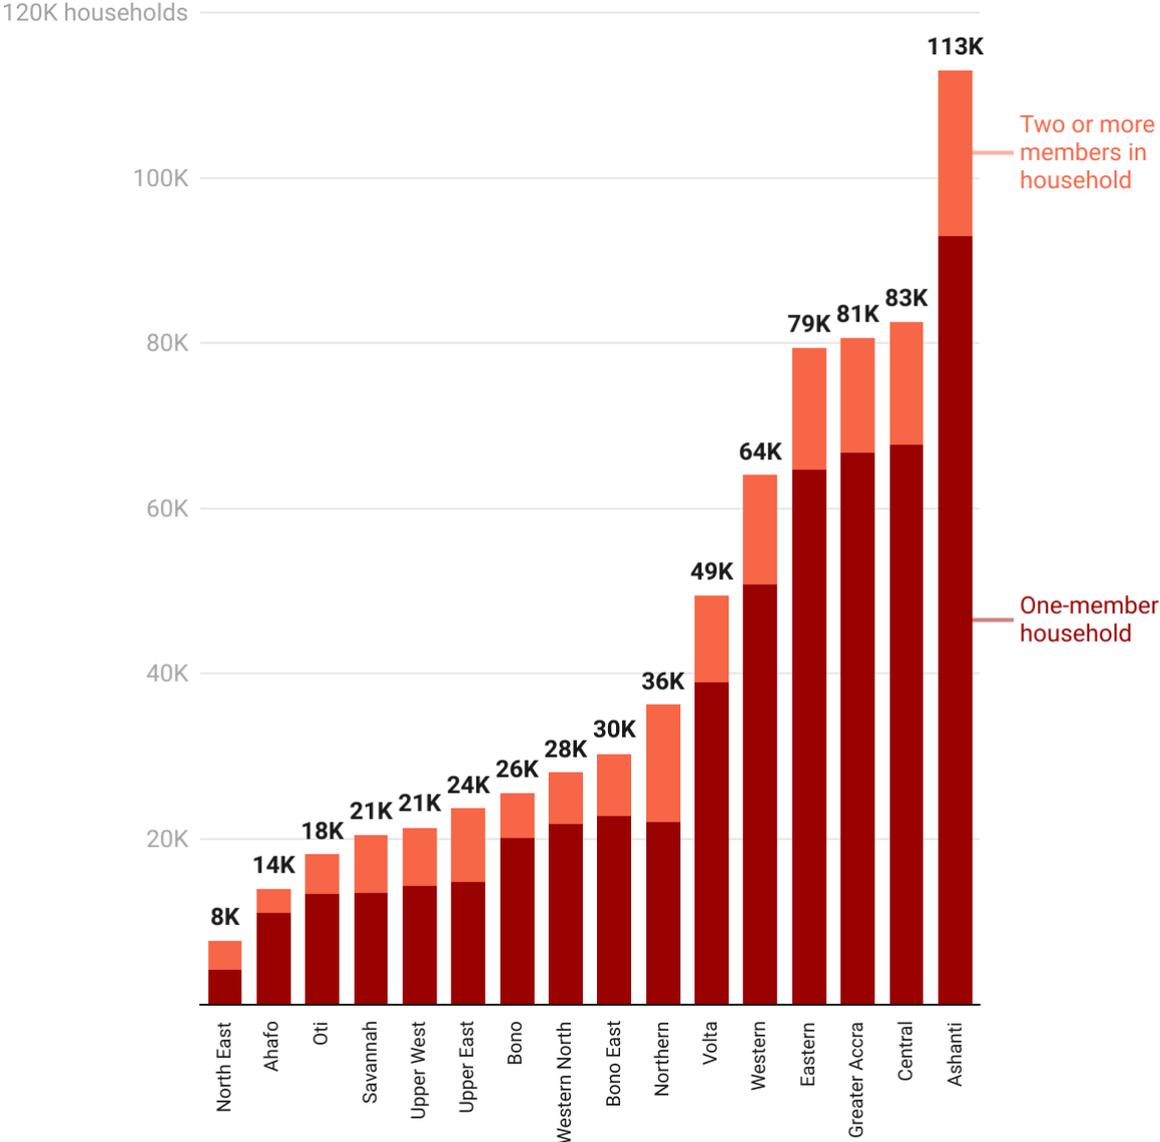

Nationally 3,800,793 (45.4%) households have at least one household member who is illiterate. Ashanti Region (600,402) has the highest number of households with illiterate household members followed distantly by Greater Accra (390,549).

FIGURE 11: HOUSEHOLDS WITH AT LEAST ONE ILLITERATE MEMBER, BY REGION

About one in five households (694,581 out of the approximately 3.8 million households) with at least one household member illiterate, has at least two members who are illiterate.

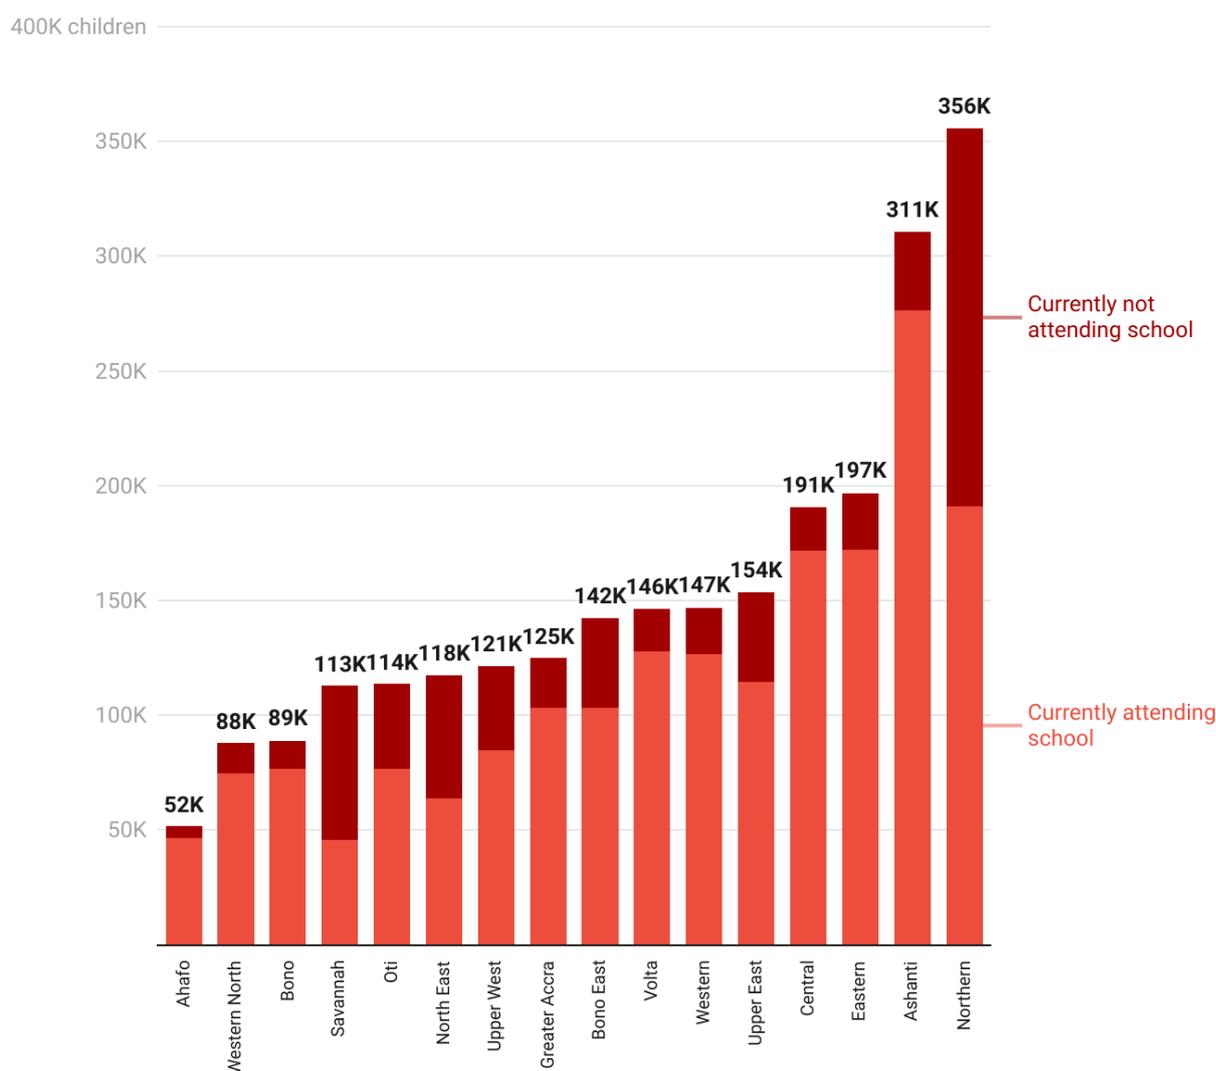

FIGURE 12: HOUSEHOLDS WITH MEMBERS THAT ARE ALL ILLITERATE, BY REGION

4.3. Correlates

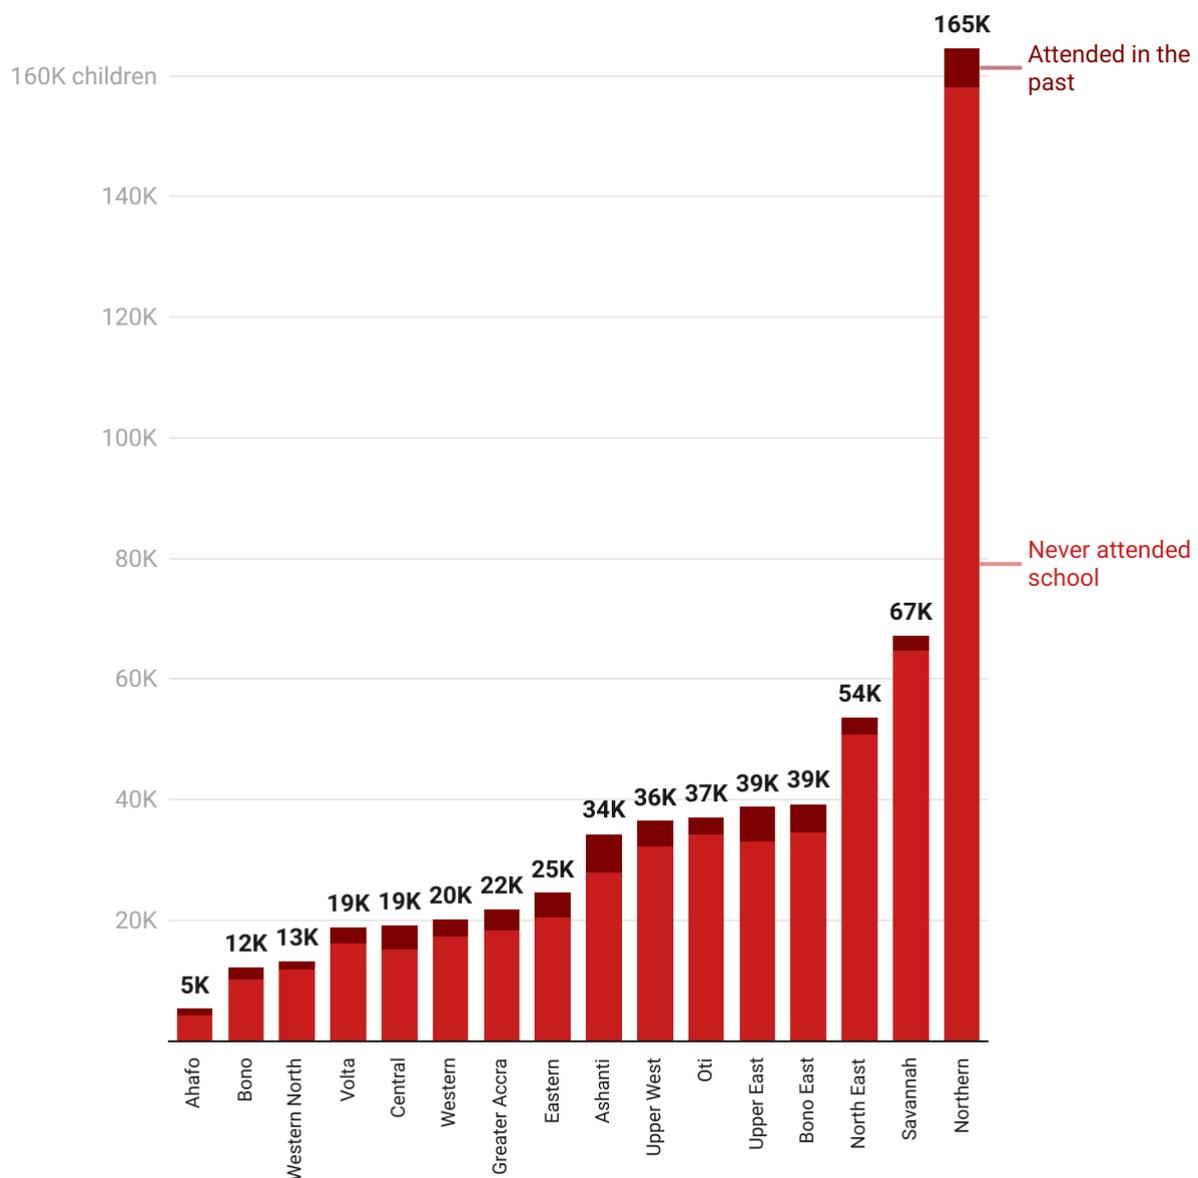

Nationally 1,855,483 out of the 2,461,740 children aged 6 to 14 years who are illiterate are currently attending school, representing three out of every four illiterate children (75.4%). Northern, North East and Savannah are the only regions where the population of illiterate children is split almost evenly between those currently attending and those not attending school.

FIGURE 13: ILLITERATE POPULATION AGED 6 TO 14 YEARS, BY REGION AND SCHOOL ATTENDANCE STATUS

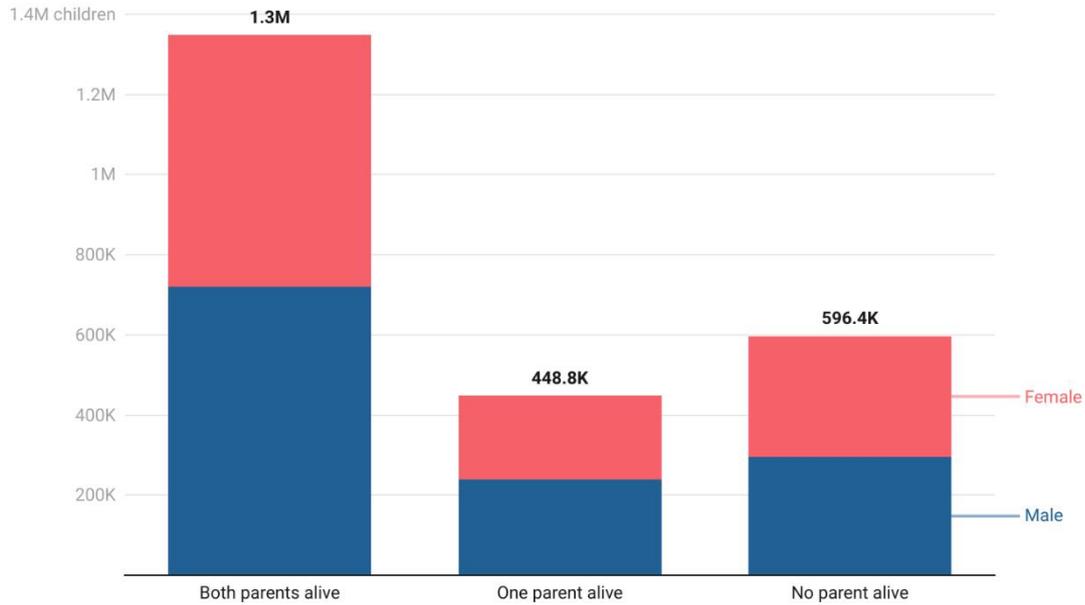

Nationally 606,257 representing almost half (47.0%) out of the 1,290,775 children who are illiterate either never attended or are currently not attending school with Northern, Savannah and North East contributing the largest share.

FIGURE 14: ILLITERATE POPULATION AGED 6 TO 14 YEARS WHO EITHER NEVER ATTENDED OR ARE CURRENTLY NOT ATTENDING SCHOOL BY REGION

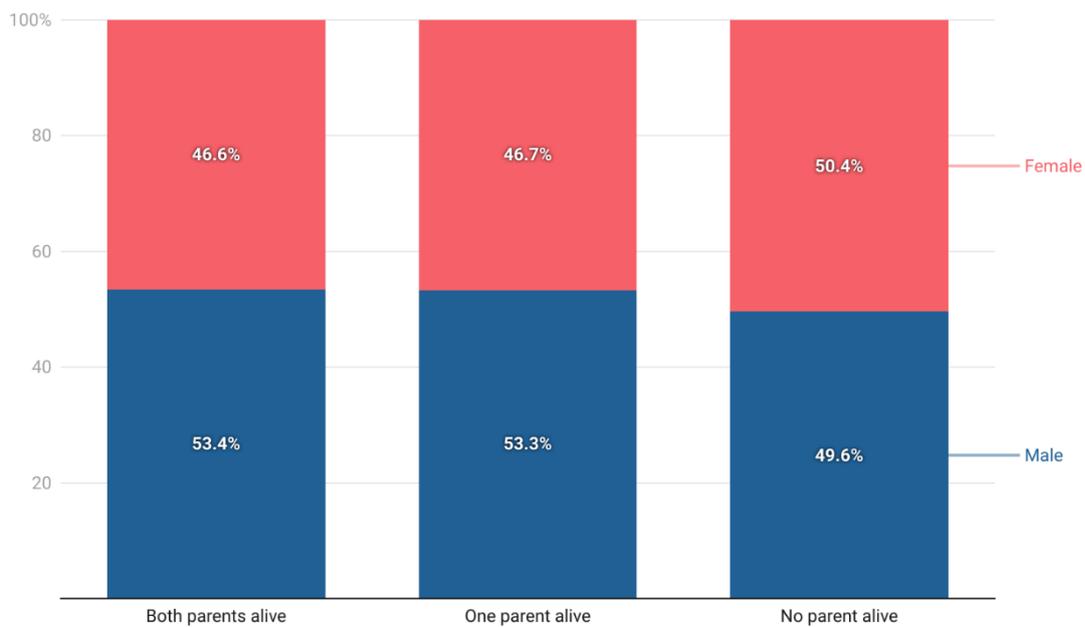

Four in every ten children who are illiterate (1,045,193 out of 2,394,176) have lost at least one parent.

FIGURE 15: ILLITERATE POPULATION AGED 6 TO 14 YEARS BY PARENTAL SURVIVAL STATUS

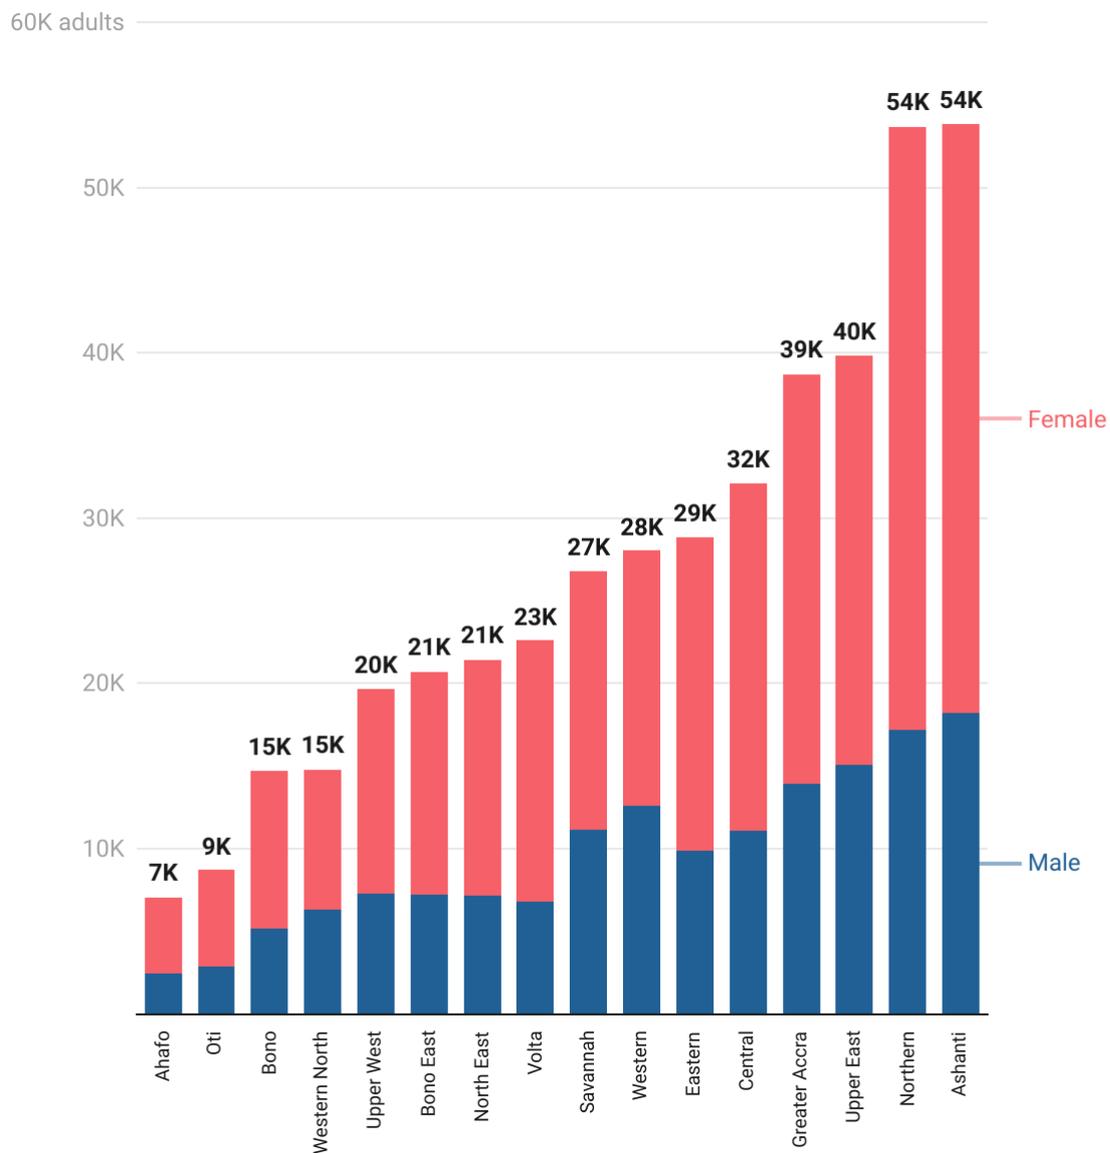

These figures are estimated only for children whose parents are the head of the household as those are the only children who can be linked to their parents in the census dataset

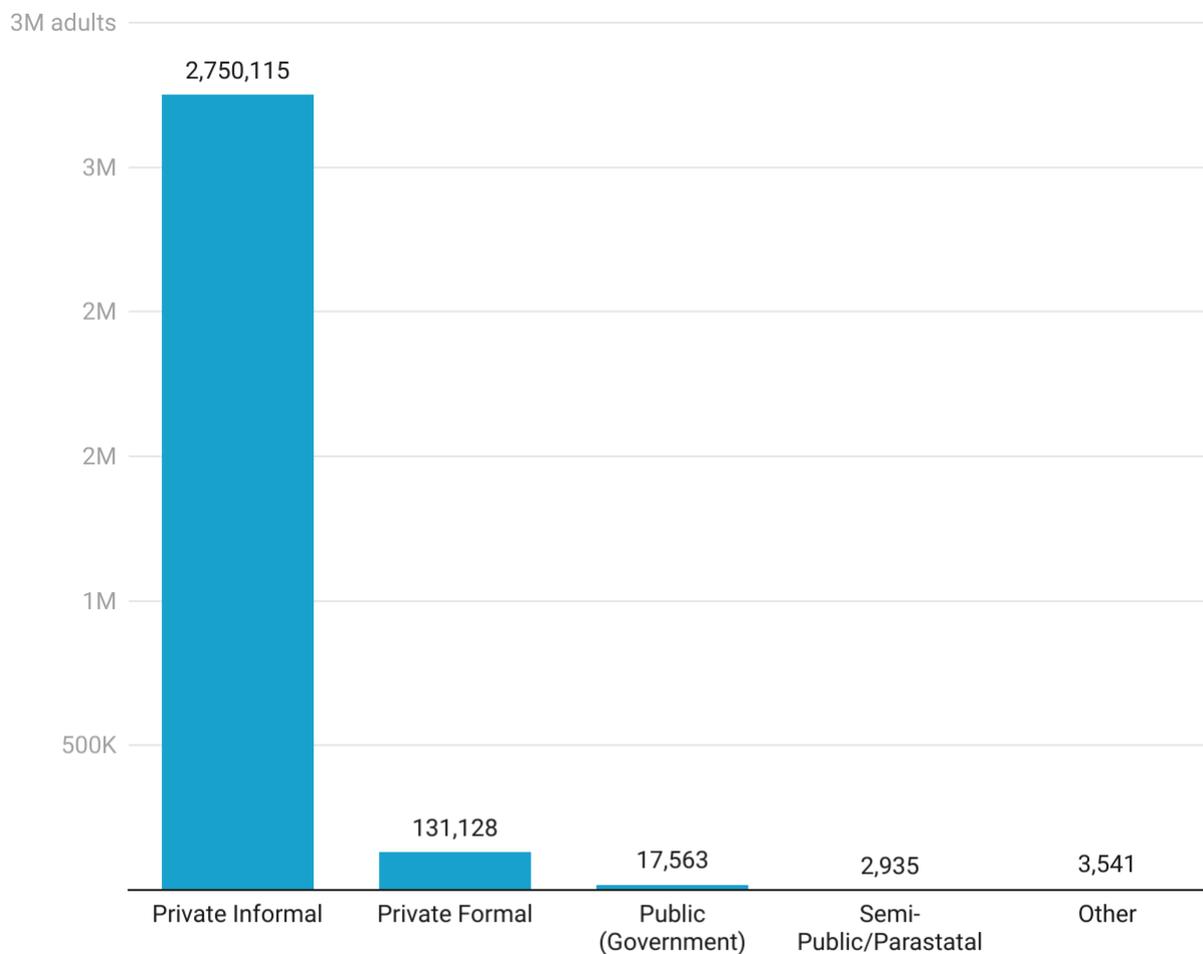

Nationally 431,417 out of the 1,551,118 (27.8%) unemployed population is illiterate with about six in every 10 (64.2%) being female. The Ashanti and Northern regions combined have almost a quarter (24.9%) of the population that is both illiterate and unemployed.

FIGURE 16: ADULT POPULATION (15 YEARS AND OLDER) WHO ARE ILLITERATE AND UNEMPLOYED BY SEX AND REGION

About 2.8 million out of 2,905,282 illiterate and employed adults (94.8%) in Ghana are employed in the private informal sector.

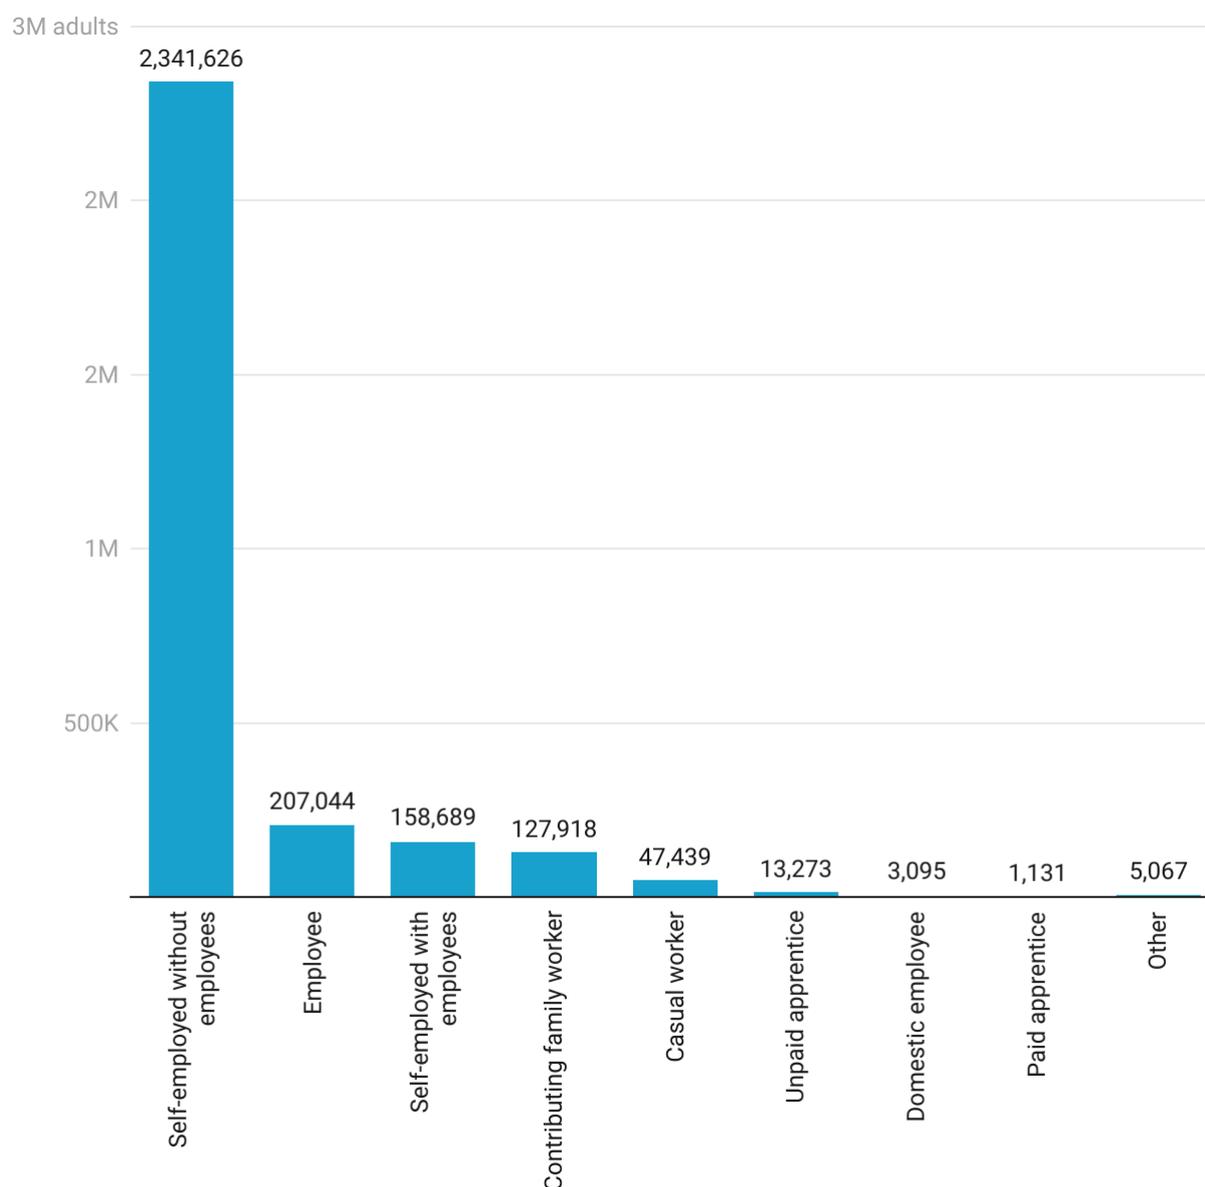

FIGURE 17: ILLITERATE POPULATION 15 YEARS AND OLDER WHO ARE EMPLOYED BY EMPLOYMENT SECTOR

Other comprises local and international non-governmental organisation (NGO)/Civil Society Organisation (CSO), local and international religious organisation or international organisation

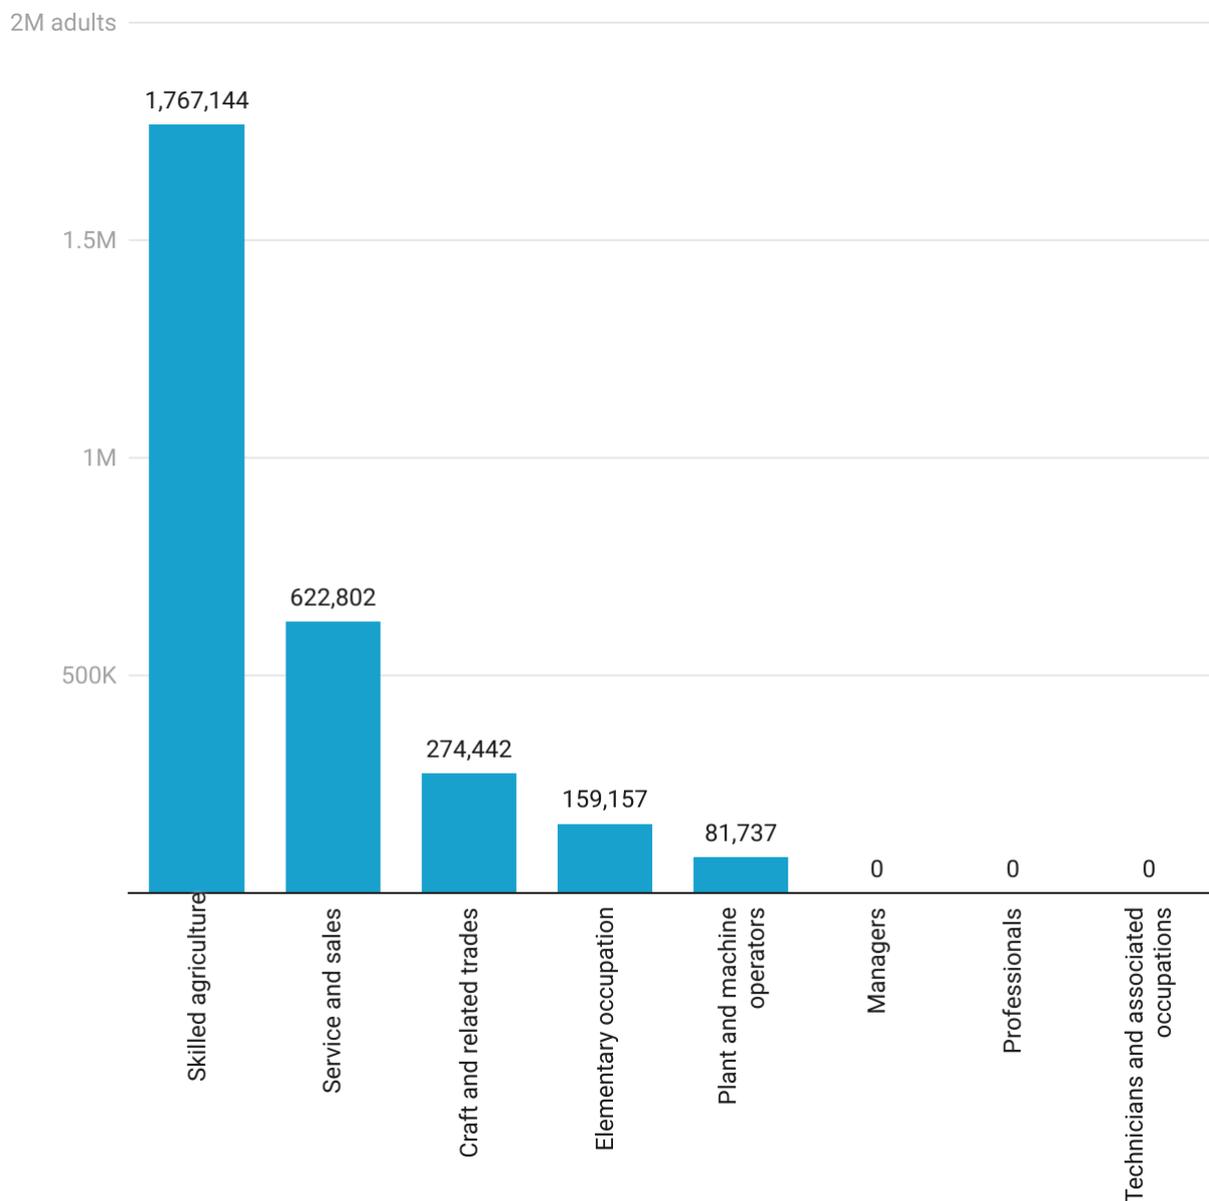

Eight in every 10 (80.6%) illiterate employed persons 15 years and older, representing a population of 2.3 million, are self-employed without employees.

FIGURE 18: EMPLOYMENT STATUS OF EMPLOYED POPULATION 15 YEARS AND OLDER WHO ARE ILLITERATE

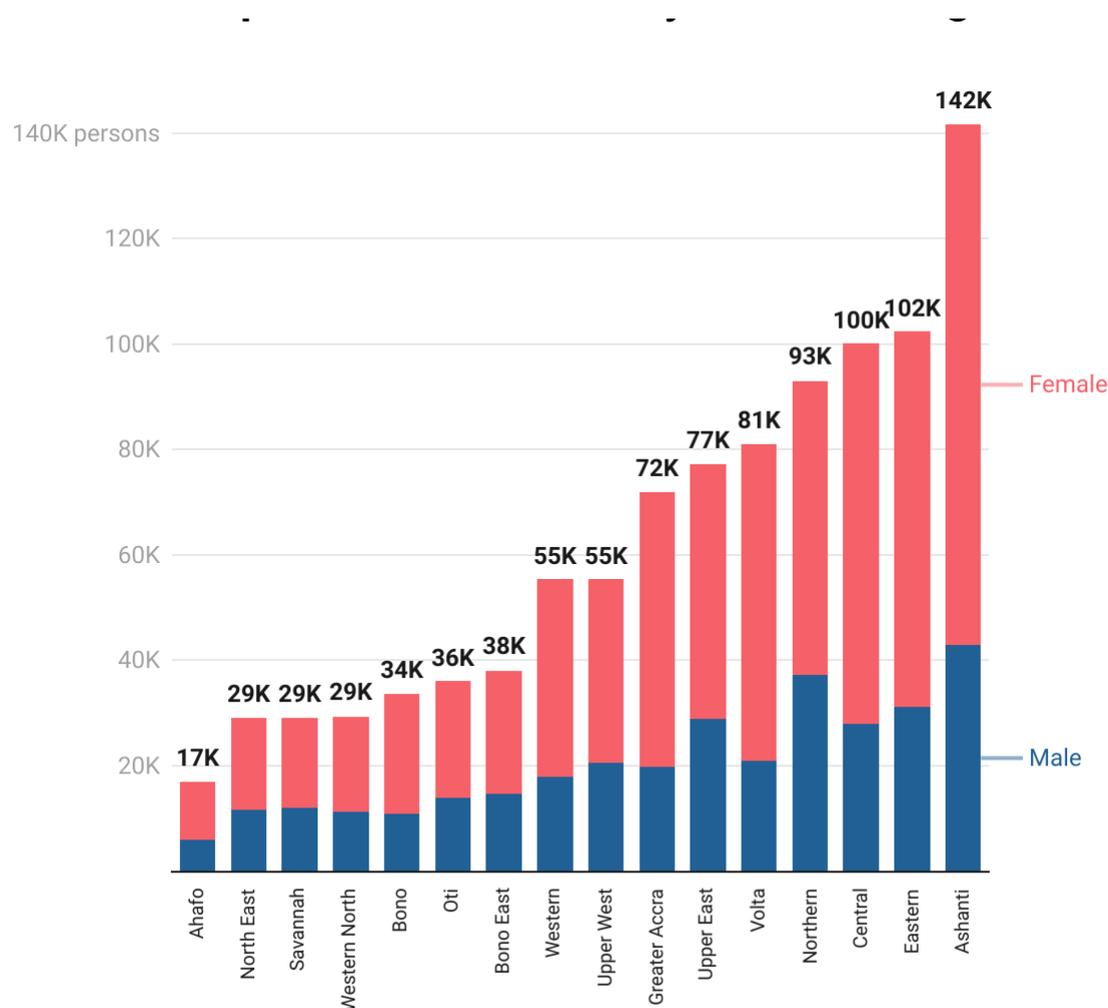

About six out of every 10 illiterate employed persons (60.8%) are in skilled agriculture occupations followed distantly by service and sales occupations (21.4%).

FIGURE 19: ILLITERATE AND EMPLOYED POPULATION 15 YEARS AND OLDER BY OCCUPATION GROUPS

Almost a million (990,431) of the 2,098,138 persons with difficulty in performing activities are illiterate. The Ashanti Region has the greatest share (14.3%) followed by Eastern (10.3%) and Central (10.1%).

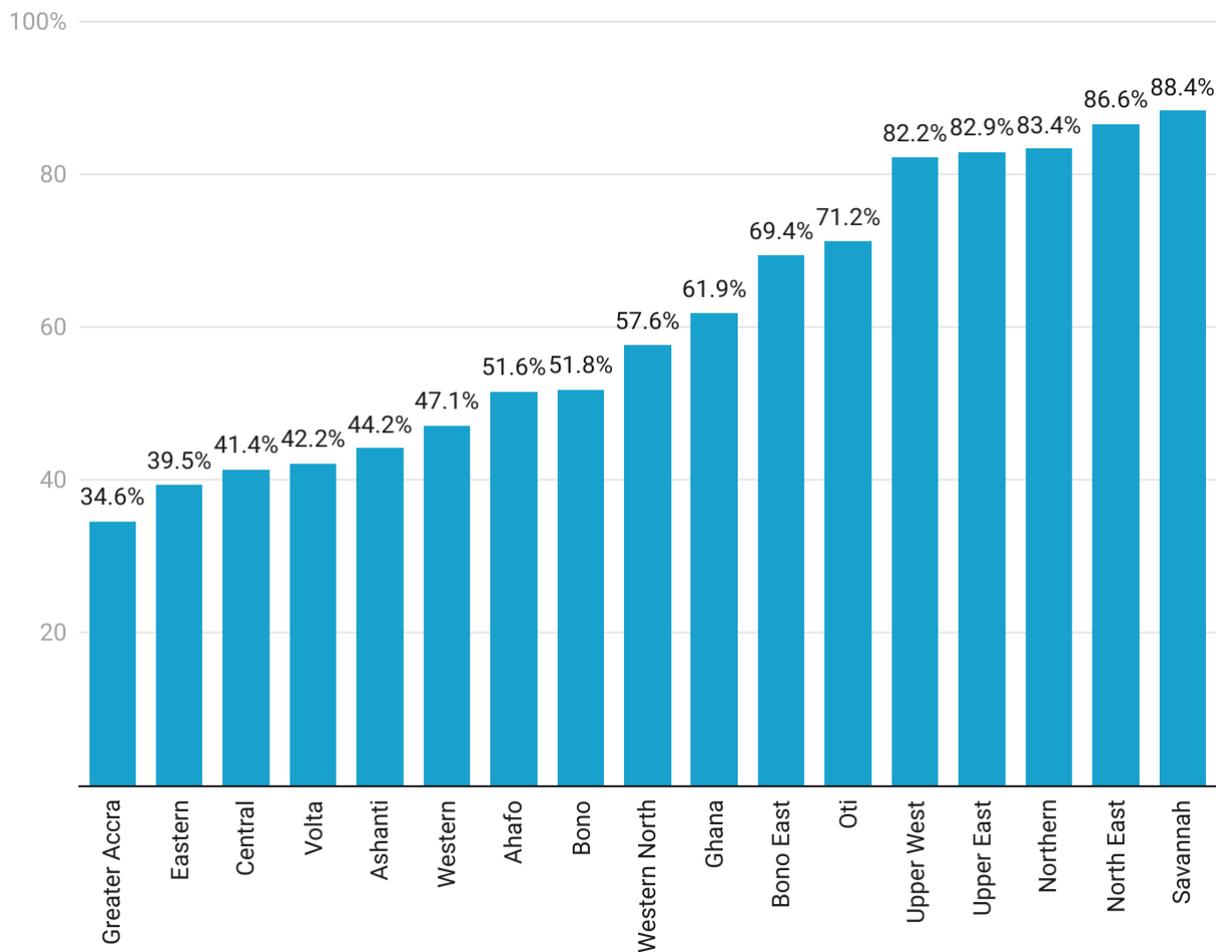

FIGURE 20: ILLITERATE POPULATION WITH DIFFICULTY IN PERFORMING ACTIVITIES BY SEX AND REGION

Difficulty in performing activities in one of the following domains: sight, hearing, physical (walking or climbing stairs), intellectual (remembering or concentrating), self-care, and speech.

Illiteracy is intergenerational. About six in every 10 (61.2%) illiterate children in Ghana have a parent who is also illiterate. In the five regions in the north, the percent exceeds 80%.

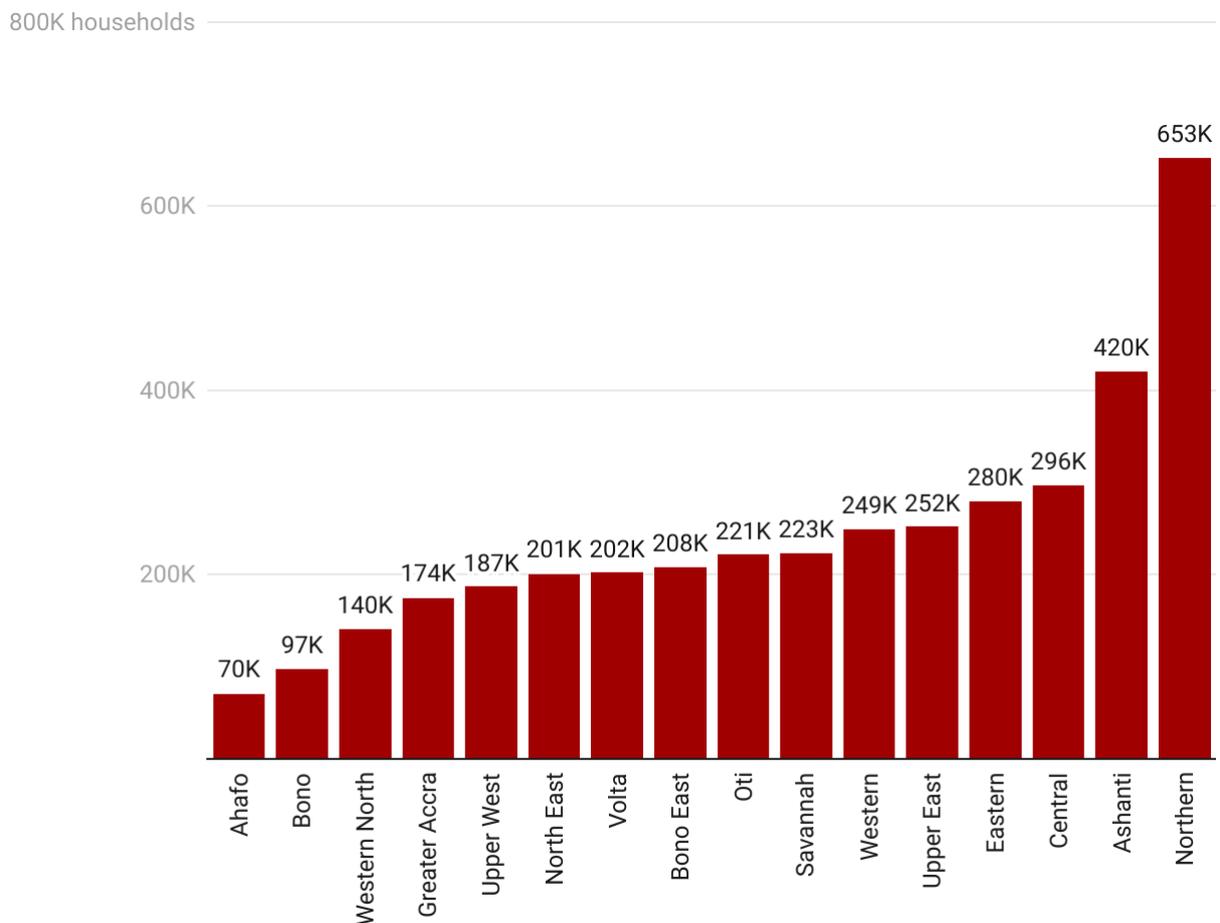

FIGURE 21: ILLITERATE POPULATION AGED 6 TO 14 YEARS ONE OF WHOSE PARENT IS ILLITERATE BY REGION

These figures are estimated only for children whose parents are the head of the household as those are the only children who can be linked to their parents in the census dataset

Nationally 3,873,864 illiterate persons representing almost half (48.9%) of the illiterate population live in households that are multidimensionally poor. The Northern region has the highest number of persons who are multidimensionally poor and illiterate (652,959) followed by the Ashanti Region (420,439).

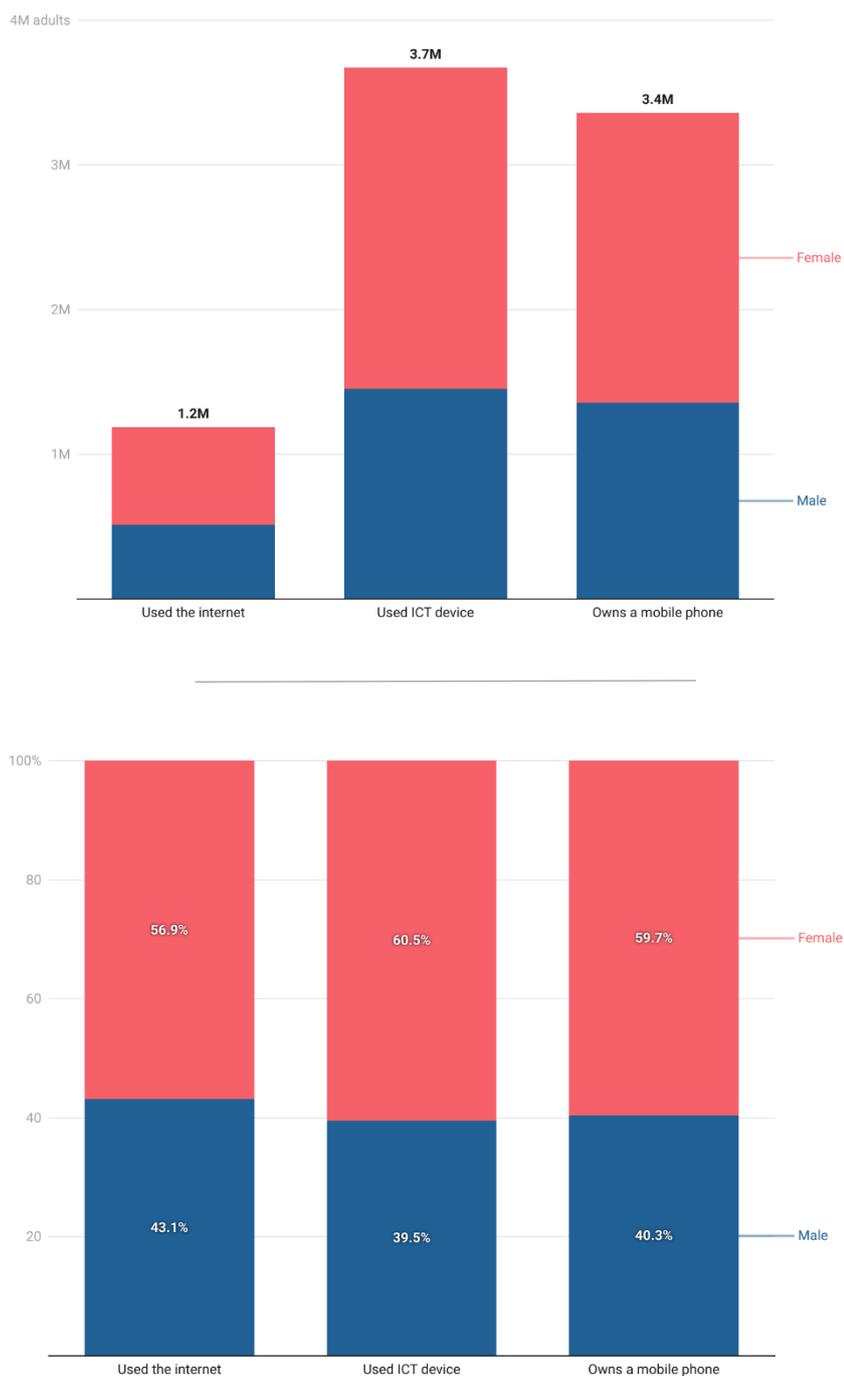

FIGURE 22: ILLITERATE POPULATION 6 YEARS AND OLDER THAT LIVE IN HOUSEHOLDS THAT ARE MULTIDIMENSIONALLY POOR BY REGION

The dimensions of multidimensional poverty are living conditions (electricity, housing, assets, overcrowding, cooking fuel, and drinking water), education (attendance, attainment, and school lag), and health (insurance coverage and nutrition)

About 3.4 million (60.8%) of the 5.5 million illiterate adults own a mobile phone. In the three months preceding Census Night 3.7 million (66.4%) of illiterate adults used an ICT device, while 1.2 million (21.5%) used the internet.

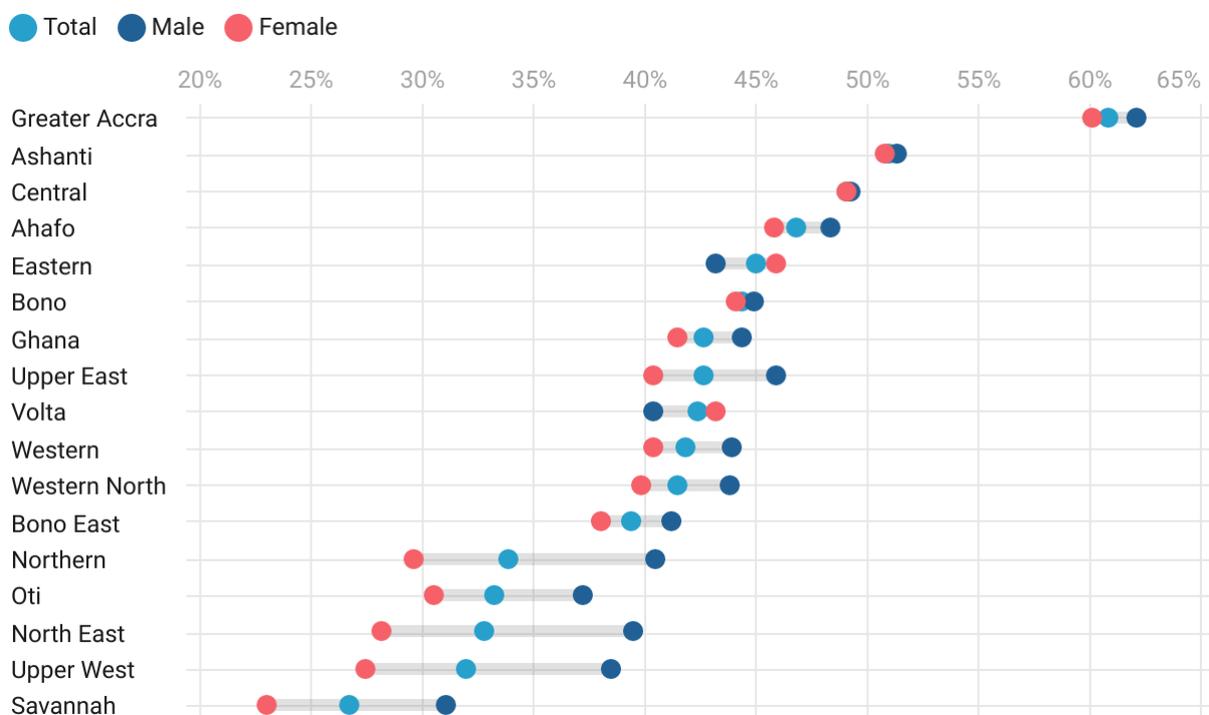

FIGURE 23: ICT USAGE OF ILLITERATE ADULTS (15 YEARS AND OLDER) BY SEX

Less than half (42.6%) of the illiterate adult population (15 years and older), representing 2.4 million illiterate adults, used a mobile phone for a financial transaction in the three months preceding Census Night (27th June 2021).

In all regions except for Eastern and Volta, a higher proportion of illiterate males used a mobile phone for a financial transaction compared to illiterate females.

FIGURE 24: ILLITERATE ADULTS (15 YEARS AND OLDER) WHO USED A MOBILE PHONE FOR A FINANCIAL TRANSACTION IN THE THREE MONTHS PRECEDING CENSUS NIGHT (27TH JUNE 2021) BY SEX AND REGION

Persons 15 years and older currently attending school are 100 percent less likely to be illiterate compared to those who have never attended school. The odds are only slightly better for the younger age bracket (6 to 14 years).

The multidimensionally poor adults (15 years and older) are more than 100 percent likely to be illiterate than those that are not multidimensionally poor, but for children (6 to 14 years) that likelihood is half.

Children who have lost both parents or their mother are more likely to be illiterates compared to those with both parents or their mother alive. Those with only father alive are 7.9% more likely to be illiterate than those with no parent alive.

Children who have at least one literate parent are 43.5% less likely to be illiterate than those who do not.

People in urban areas are 43.2% less likely to be illiterate than those in rural areas, but the odds are more favourable for children than for adults.

TABLE 1: PERCENTAGES OF ODDS RATIOS FROM THE LOGISTIC REGRESSION RESULTS PREDICTING ILLITERACY

Variable	6 years and older	6 to 14 years	15 years and older
<i>Base category (male)</i>			
Female	30.2	-6.0	88.7
<i>Base category (never attended)</i>	-	-	-
Attending now	-99.7	-97.3	-100.0
Attended in past	-99.5	-94.3	-99.6
<i>Base category (not multidimensionally poor)</i>	-	-	-
Multidimensionally poor	66.3	52.7	117.9
<i>Base category (did not use ICT)</i>	-	-	-
Used ICT	-90.0	-60.8	-80.0
<i>Base category (no difficulty)</i>	-	-	-
Difficulty in performing activities	92.7	4.1	10.6
<i>Base category (rural)</i>	-	-	-
Urban	-43.2	-49.7	-40.1
<i>Base category (no parent alive)</i>	-	-	-
Both parents alive	-	-8.0	-
Only mother alive	-	-8.7	-
Only father alive	-	7.4	-
<i>Base category (illiterate parent)</i>	-	-	-
Literate parent		-43.2	

The model also controls for age and region

5. CONCLUSIONS

Despite the increased proportion of literate persons in Ghana over the past two decades, the global agenda of *leave no one behind*, necessitates concern with the growing absolute numbers of persons who are illiterates.

The variation in the number of illiterate children in the Education Strategic Plan (ESP) 2018 – 2030 Policy document and findings from previous censuses and surveys calls for harmonisation of the statistics on literacy across state agencies. Moving forward, the pathways for assessing the KPIs of ESP, and the data collection modes and measurement of these KPIs, has become apparent given the characterisation of illiteracy in Ghana.

The multifaceted nature of the causes and effects of illiteracy in Ghana, coupled with the variations by sex, age and location (region, district, and type of locality) warrants immediate intervention by the government and other relevant stakeholders.

The finding that illiterate populations in Ghana are more concentrated in certain geographic areas, particularly in the regions of the north and in rural areas across the country, makes it possible for easy targeting of interventions.

The intergenerational transfer of illiteracy points to a need for both literacy and sensitisation programmes targeting illiterate persons of reproductive age to ensure that their children attain the requisite education participation to promote their literacy. Special attention must also be paid to vulnerable populations i.e. those living in multidimensionally poor households, children who have lost a parents, and those with difficulty in performing activities.

6. APPENDIX – DISTRICT TABLES

Additional tables on Literacy are available in the 2021 PHC General Report Volume 3D: Education and Literacy (<https://bit.ly/2021phcreports>) and from the Census Statistics dashboard (<https://ghanastat.com>).

TABLE 2: POPULATION 6 YEARS AND OLDER THAT IS ILLITERATE, BY DISTRICT AND SEX

District	Total	Male	Female	Percent Male	Percent Female
<i>Western</i>					
Jomoro Municipal	36,331	14,420	21,911	39.70%	60.30%
